## Survey Methodology

The current cycle of the web-based Community Survey collected survey data between January – March 2025. Respondents were digitally recruited (e.g., over social media, mobile apps, websites, and survey panels). These ads are targeted to residents, and responses are only included in the data when a local valid zipcode is provided.

Respondents who self-reported being under 18, who declined to provide any demographic information, or those who provided an invalid zipcode are excluded from the results.

631 valid respondents participated in the web-based Community Survey during this cycle.

## Representation

Zencity ensures broad demographic representation in several ways:

Before data collection, Zencity employs national statistical data to establish response targets. These targets are defined based on race/ethnicity, age, and gender.

During data collection, we track the demographic composition of the survey responses in real time, comparing them to the predetermined targets. We fine-tune our distribution and advertising strategies as needed to target all demographic groups.

After data collection, Zencity employs an industry-standard statistical technique called rake weighting. This assigns a unique weight to each respondent based on their demographic characteristics. This method ensures that the distribution of these characteristics in the final weighted sample aligns with the community's overall demographics.

# Overall
# Quality of Life

Residents' quality of life is a key metric for local government leaders. Here, we present how Fort Lauderdale residents are feeling about their quality of life, looking at how this changes by demographic group and geography.

We will show the percent of valid respondents who reported either a 4 or a 5 on the 1-5 scale, weighted by age, gender, and race/ethnicity (see page 3 for details).

Scores will be shown only for groups (e.g., for a geographic area or for a demographic group) with at least 30 responses. For groups between 30 and 49 respondents, we highlight the small sample size using an (!). Use these scores with caution.

# Community Benchmark

We aim to help Zencity clients understand their results and put them into context. To that end, we will compare Fort Lauderdale's results to the United States as a whole and against communities with similar characteristics such as size, population density, and region (their "cohort").

These cohorts help to distinguish patterns unique to each client from those that are common in similar communities.

# Community Benchmark

## How we compare Fort Lauderdale to other similar communities

### Creating the cohorts

First, all cities, towns, and counties in the US--not just Zencity clients--are put into cohorts based on geography and demographics using a method known as cluster analysis. This method balances a range of different characteristics to put communities into cohorts that are statistically similar to one another. The result of this step is one set of cohorts for cities and towns and a second set for counties.

We chose this method to create objectively similar groups of communities with respect to characteristics that are likely to be correlated with answers to the survey questions. By creating cohorts of larger sets of communities we have found that our benchmark baselines tend to be more reliable than they would be if we had direct comparisons of a small number of communities. See our Help Site for more information on cohorts, including the full list of communities in your cohort.

### Creating cohort scores and national benchmark scores

The Zencity National Benchmark Survey is conducted semiannually, collecting about 5000 responses across the country. The cohort scores are the weighted average of scores for respondents in each cohort. These weights are calculated to match the client's own demographics, to make them directly comparable to the clients' scores. National scores are calculated in a similar manner.

# Community Benchmark

January - March 2025                    Powered by ⌾ Zencity

## Your Cohort

Fort Lauderdale is in the South and Central Small/Medium Cities cohort. The table below shows some demographics of your community and general makeup of communities in your cohort. Note that all percentages are the percent of the 18 and over population.

See our Help Site for the full list of communities included in your cohort. Because we are creating a cohort from the National Benchmark Survey data instead of running representative surveys of selected communities, most cohort scores are generated from a few responses from each community.

| | 18+ Pop. | % age 18-34 | % age 55+ | % White | % Black | % Hispanic | Median income |
|---|---|---|---|---|---|---|---|
| Fort Lauderdale, FL | 151,762 | 27% | 41% | 66% | 26% | 19% | $75,376 |
| | Median 18+ Pop. | Avg. % 18-34 | Avg. % age 55+ | Avg. % White | Avg. % Black | Avg. % Hispanic | Avg. Median Income |
| South and Central Small/ Medium Cities | 111,877 | 34% | 34% | 59% | 21% | 21% | $73,482 |

# Free-Text Responses

Respondents were asked open-ended questions about what the Fort Lauderdale government does well and how Fort Lauderdale could improve its services.

This section presents the main themes from both questions. Using our proprietary AI algorithm, responses are analyzed and categorized into unique topics and subtopics for Fort Lauderdale, with multiple labels assigned to responses when relevant.

To ensure comprehensive information, responses that have been flagged as invalid (e.g., under 18, missing demographic data, or invalid zip codes but claiming residency in Fort Lauderdale), are analyzed in the free-text responses but excluded from the quantitative results.

# What is the #1 thing you think the Fort Lauderdale government does well?

Feb 1, 2025 · Area: -

Female, 35-54, White

I can say Fort Lauderdale is a lot cleaner than Miami per say. It does a great job at keeping the street clean when it comes to homelessness as well.

Cleanliness  Homelessness  Public Satisfaction

Jan 25, 2025 · Area: District 1

Female, 35-54, White

They keep the City clean and are keeping their parks well preserved.

Listen to the people

Community Engagement

Feb 3, 2025 · Area: District 2

Male, 55+, White

Develop rules for construction and road work that take the residents quality of life as top priority. Too many rolling road closures. Many big cities require these inconveniences to be done at night. General condition of roadways is poor, just drive down Las Olas, there is no reason why it can't be repaved while the multi year debate goes on.

Local Issues   Traffic

Feb 20, 2025 · Area: District 1

Female, 18-34, Black Or African American

I think that they can hold rally meetings on hearing local residence on what we need to do such as communicating back and making the place a safer place

Resident Support   Community Engagement

Feb 20, 2025 · Area: District 1

Male, 18-34, Black Or African American

The number one thing Fort Lauderdale's government could improve is its approach to affordable housing and infrastructure resilience. With rising rent prices and the cost of living skyrocketing, a lot of residents—especially working-class families—are getting priced out. The city needs stronger policies to support affordable housing developments and protect long-time residents from displacement. On top of that, flood control and drainage infrastructure need continuous upgrades. With climate change causing more extreme weather and rising sea levels, the city has to stay ahead of the curve to prevent flooding from getting worse. If you had to pick one thing they should focus on, what would it be?

Drainage   Infrastructure   Flooding   Affordability   Resident Support
