

Sciton SkinTyte™ Skin Rejuvenation

SkinTyte™ utilizes advanced infrared light technology to gently heat the skin. This process stimulates collagen production to improve the appearance of skin laxity. Available for all skin types with no downtime.

Treats the following conditions:

- Fine lines and wrinkles
- Loss of elasticity
- Sagging skin

Ideal Areas Treated:

- Face
- Neck
- Can also be used on other parts of the body

For optimal results, 6 treatments are recommended at intervals of 2-4 weeks.

With any laser treatment, it is best to avoid sun exposure two weeks prior to treatment, during the course of treatment and after treatment's are complete. Unprotected sun exposure may or may not have contributed to your condition, but it can certainly affect your results. Remember, all natural light causes sun damage and UVA is present all day long, through window glass and clouds.

Multiple Area Discount:

Receive an additional 15% off equal or lesser priced area
(includes single treatments and packages)

Sciton SkinTyte™ Post Treatment Instructions

- Localized redness and mild swelling may be present and typically resolves within 24-48 hours.
- To avoid hyperpigmentation after treatment, avoid sun exposure and use a broad spectrum (UVA/UVB) sunscreen with a SPF of at least 30. It is vital to maintain your improved skin. We also recommend using SkinCeuticals Epidermal Repair Cream, a therapeutic treatment for post laser skin, for 48 hours after treatment or as needed.
- Avoid any irritants to your skin, such as products containing retinoic acid, glycolic acids, and benzoyl peroxide for 3 days after your treatment.
- Only use a gentle cleanser, post-treatment moisturizer and sunscreen for 3 days after treatment. We recommend using **SkinCeuticals Epidermal Repair Cream**, a therapeutic lotion for post laser skin, while the skin is healing.
- No waxing, depilatories, or electrolysis for at least 3 days post treatment.
