

Sciton Moxi™ Skin Rejuvenation

MOXI™ is a gentle, non-ablative, fractionated laser designed to effectively treat the visible signs of aging, sun damage and rough texture. This resurfacing treatment is ideal for all skin types and can be performed any time of the year.

Treats the following conditions:

- Superficial Pigmentation & Melasma
- Uneven Skin Tone
- Rough Or Uneven Skin Texture, Dullness
- Signs Of Aging, Fine Lines & Wrinkles
- Enlarged Pores

Ideal Areas Treated:

- Face
- Neck
- Chest
- Hands

For optimal results, 3 treatments are recommended at intervals of 4 weeks.

Plan treatments accordingly as skin could take up to 2 weeks to heal depending on area treated.

- Localized redness and swelling may be present and typically resolve within 24 to 72 hours.
- Depending on your level of treatment, you may see small micro dots called "MENDs" (microscopic epidermal necrotic debris) where the laser was applied. As the skin heals, the MENDs will darken and feel rough like sandpaper. Between days 5-14, the MENDs will slough off, revealing new skin beneath.
- With any laser treatment, it is best to avoid sun exposure two weeks prior to treatment, during the course of treatment and after treatment's are complete. Unprotected sun exposure may or may not have contributed to your condition, but it can certainly affect your results. Remember, all natural light causes sun damage and UVA is present all day long, through window glass and clouds.
