HEALTHY SUBJECTS NEEDED FOR A HEMP PHARMACOKINETIC STUDY

The purpose of this research study is to determine how the body processes (e.g., absorbs, distributes, eliminates) a specific hemp product. This study will take place over a total of 15 days. On day 1, blood will be drawn from an intravenous line following administration of the hemp product. Urine samples will also be collected. Single blood draws will occur on days 2-3. On days 2-7, you will receive one dose per day of a well-characterized hemp product to self-administer. On day 8, you will follow the same procedures as day 1. Single blood draws will occur on select days from days 8-15. You will receive a screening medical exam and will undergo routine laboratory and drug tests prior to participating in the study.

You may be eligible to take part in this study if you
- are 21-64 years old and healthy;
- pass a drug test;
- are not taking any medications, dietary/herbal supplements, or citrus juices that can interfere with your ability to eliminate the study drugs;
- are not smoking or vaping tobacco or cannabis/marijuana products
- are willing to abstain from consuming caffeinated beverages or other caffeine-containing products the evening before and the morning of the first day of each study part;
- are willing to abstain from consuming any alcoholic beverages for at least 1 day prior to any study day and during the study day;
- are willing to use an acceptable method of contraception that does not include oral contraceptive pills or patches (such as abstinence, copper IUD, condom); and
- have the time to participate.

You will not be eligible to take part in this study if you
- have a chronic illness;
- have a hematologic (blood) disorder;
- have a history of drug or alcohol abuse;
- have any major psychiatric illness;
- currently use tobacco or cannabis/marijuana;
- are pregnant or breastfeeding;
- have a history of allergy to hemp, sesame oil, or sunflower lecithin; and/or
- are taking concomitant medications, both prescription and non-prescription (including dietary supplements/herbal products) known to alter the pharmacokinetics of hemp.

You will receive up to $875 for completing this study.

The Washington State University College of Pharmacy and Pharmaceutical Sciences is conducting this research study through funding provided by Cultivate Biologics.
