What MCR Safety Offers You

We Support our Distributors with exceptional resources:

- Two distribution facilities - Tennessee services most of our 9 adjoining states with next day LTL service; the east coast and Midwest with two day service. Nevada also services the west coast with next day service.
- Sales Team – Sales Managers, Sales Development, and Customer Service collectively service our customer needs and provide unmatched PPE expertise.
- Independent Manufacturing Representative Groups – Additional sales support nationwide.
- We have dedicated safety professionals committed to engaging at industrial workplaces to demonstrate our products, provide training, and extend our 360° protection program. They operate from service vans equipped with our gloves, glasses, and garments.
- MCR Safety web site – Comprehensive, user-friendly technology is reflected by the many Distributor Resources that are available 24/7 from our www.mcrcsafety.com web site.

We Provide marketing tools:

- Private labeling – Our catalog plus most of our PPE product offerings and accessories.
- Product image library – log in and download our product images, logos, and model shots in the format(s) you choose.
- National advertising – Industrial and safety trade journals, magazines, and web sites.
- Trade show participation – NSC, ASSE, VPPPA, World of Concrete, Fabtech, and various regional/international shows
- Lead management service – Available upon request.
- Trade Associations:

Affiliated Distributors (AD) www.adhq.com

National Safety Council (NSC) www.nsc.org

Industrial Glove Association (IGA) www.iga-online.com

International Safety Equipment Association (ISEA) www.safetysystem.org

Voluntary Protection Program Participants' Association (VPPPA) www.vpppa.org

AFFILIATED
DISTRIBUTORS

Product knowledge expertise:

Online Product Document Library – Specification sheets, sales sheets, and other helpful literature.

Online Training – Training modules for distributor sales and customer service personnel with quantitative test scores.

Online Product Reference Library – A comprehensive collection of all our PPE products with features, styles, sizes, and colors available.

Online Cross Reference – Search by style numbers for recommended equivalent PPE competitive offering.

Online Permeation Guide – Recommended PPE offerings for chemical environments

MCR Safety's 360° Protection Program is designed to perform assessments and review workplace hazards. This service provides emphasis on cost savings, enhanced productivity, and risk reductions. Results are achieved by the execution of our five-step process that evaluates,

Vending management of safety gear is spreading throughout our industry and across the nation. Vending programs provide opportunities to reduce costs associated with tool crib management. Companies are able to maintain usage records, regulate quantities dispensed, and control access to employees. Vending Gear options are available for our gloves, glasses, and garments.

Gloves are rolled, boxed, poly-bagged, and also available with hang tags (Look for the  symbol throughout the book.)

Glove styles with "VP" incorporated into the style number are individually rolled and shrink-wrapped. Other gloves that are also suitable for vending machines include gear with point of purchase tags, dispenser boxes, and poly-bagged. 

Our vending options for glasses include individual poly-bags and bulk packaged within each case. Magnifiers are available individually boxed. Goggles are available in either individual boxes or poly-bags. Several accessories are also vending machine friendly. Our recently redesigned vest packaging provides vending friendly options. All rain gear and other garments are individually packaged but subject to vending machine capacity limitations.

Our Product Listing and Price Lists do reflect "pair" and "each" unit of measure which are potentially vending machine ready. All VP styles must be purchased by the case pack. Contact your Sales Team for a complete listing of our Vending Gear.

Gloves rolled and rubber banded:

VP1311L	Double Leather Palm , Full 2 1/2" Rubberized Safety Cuff, L	VP9460K	"Red Brick" 2 Ply Loop In Terry Nitrile Blocks 2-Sides Mens

GLOVES FOR FOOD PROCESSING APPLICATIONS

Our manufacturers confirm that our disposable styles are made of component materials that comply with all relevant federal regulations for food processing applications.

The FDA publishes a list of approved ingredients for the makeup of "articles (Gloves) intended for repeated use...in producing, manufacturing, packing, processing, preparing, treating, packaging, transporting, or holding food". This information is in the Code of Federal Regulations 21 CFR, Parts 170-199.

If a glove is manufactured with the FDA accepted ingredients listed in 21 CFR, Parts 170-199, you may advertise your product as "Component materials comply with all relevant federal regulations for food contact".

In the past, all products intended for direct food contact had to be manufactured with FDA accepted ingredients, and they had to be formally approved by the USDA. The procedure has now changed due to the liability involved. Self-certification of compliance with FDA materials is now acceptable.

USDA - United States Department of Agriculture

FDA - Food and Drug Administration

WHAT IS MEDICAL GRADE?

The FDA is responsible for determining whether or not a glove is suitable for medical applications. In our industry, we refer to certain gloves as being "Medical Grade". This means that a glove has met FDA guidelines for classification as a CLASS I medical device. These types of gloves have a variety of applications including physical examinations and handling pharmaceuticals. The gloves that we market as medical grade are non-sterile.

In order to market a glove as medical grade, you must submit a pre-market notification [510(K)] to the FDA. A [510(K)] application consists of several detailed questions, and it requires that two tests be performed and results listed. The first test is the FDA 1000 ml. water test that determines whether pinholes are present. The second test is A.S.T.M. D3578-77 that tests the physical properties of the glove. The physical properties that have to be recorded are Tensile Strength, Ultimate Elongation, and Modulus of Elasticity at 300% Elongation.

If the FDA accepts the performance of your glove, you are issued FDA registration numbers, and you may advertise your glove as medical grade, or FDA 510 (K) compliant. The FDA will not allow you to market your product as FDA "Approved" due the liability involved.

As a general rule: Chores/Double Palms - recommended up to 200 degrees; Hot Mills - recommended up to 400 degrees

ANSI Conductive (contact) Heat Ratings

- Time to pain (alarm) is recorded at 100°F or 39/40°C when conducting an ASTM F1060-08 conductive heat test using our DAQ machine. (Note the DAQ machine is the device that the 2 sensors are connected to. It connects to our formula charts to track heat flux based on our calibration)
- The temperature at which point 2nd degree burns occur is 131°F or 55°C. This is also called the stoll line – the point at which enough heat has transferred through the material to cause 2nd degree burns.
- Test Method ASTM F1060-08
- Highest contact at which both time-to-2nd degree burn ≥15 seconds and alarm time ≥4 seconds.

Level	Level 0	Level 1	Level 2	Level 3	Level 4	Level 5
Temperature Recommendation	None	176° F	284° F	392° F	500° F	608° F

Variables Affecting Recommendation:

- 1) Temperature
- 2) Duration of time to hold object
- 3) Weight of object handled
- 4) How much dexterity is needed

Types of heat:

- Radiant – generated by a source of fire or by the sun.
- Ambient – the surrounding atmospheric temperature.
- Conductive – direct contact with hot surfaces.

ANSI / ISEA 105 ANSI CUT test Protocol

The American National Standard Institute and the International Safety Equipment Association have recently updated our industry's ANSI/ISEA 105 Standard. This updated standard will provide the criteria to better identify levels of cut protection, abrasion, puncture, chemical, heat, vibration, and dexterity. Much of our industry's attention will be directed toward enhancements in cut protection levels.

These changes are necessary to help our industry move toward establishing an international test method for cut protection. Note going forward there will be nine (9) levels of cut protection as opposed to six (6) from the previous method. Additionally, all levels will reference "A" as a prefix to identify compliance with the new standard.

Recognize performance levels for CE and ANSI/ISEA 105 are different test methods and are calculated differently. Grams are used for the ANSI/ISEA 105 and the EN388 uses an "index" with a different scale for scoring. Test methods cannot be directly related. Different standards mean different performance at the same "level".

MCR Safety has over forty-five years of experience as a leader in the field of personal protective equipment (PPE). MCR Safety exceeds the needs of workers with quality cut protection products featuring Aylcore™, DuPont® Kevlar™, DSM® Dyneema®, and other cut resistant materials. MCR Safety's Innovations Technology Center Laboratory (ITC Lab) is accredited to the ISO/IEC 17025:2005 standard. ISO/IEC 17025 is the single most important standard for testing laboratories around the world. Laboratories that are accredited to this international standard have demonstrated they are technically competent and able to produce precise and accurate test data.

Our ISO/IEC 17025 accredited scope includes ANSI/ISEA 105-2016 coated/uncoated abrasion testing, puncture testing and cut testing. MCR Safety will be able to set itself apart from the competition by having one of the few ANSI/ISEA 105-2016 testing laboratories in the world, which is accredited to ISO/IEC 17025. Workers who wear our gear refuse to be out-performed and so do we. We are committed to bringing our customers products that work as hard as they do.

Cut Branding Guidelines

All Kevlar primary fiber options

All Dyneema primary fiber options

All 100% HPPE Knits & Plaited
All Non-Branded Fibers

Kevlar is primary fiber blended with
other fibers engineered by MCR Safety

Know Your Cut Protection!

Cuts, lacerations, and punctures consistently rank in the top three categories for injury types based on the National Safety Council "Injury Facts" annual publication. In effort to guide you through our industry's test methods and arm you with information to make the most appropriate recommendations, we encourage you to rely on this catalog as your handbook.

Prior to making any product recommendations, to determine how much cut protection is needed consider these **qualifying questions**:

- ◊ Do you know the cut performance level needed?
- ◊ Is your cut performance level based on American National Standards Institute (ANSI/ISEA) ANSI CUT test or Certified European (CE) EN388 test?
- ◊ Do you have a specific gram performance level?
- ◊ Do you have a fiber or material (Alycore, Dyneema, HPPE, KEVLAR, engineered yarn) preference?
- ◊ Do you have a polymer coating preference for grip requirements?
- ◊ Do you need liquid or chemical protection?
- ◊ Do you need thermal protection? If so, what is the temperature range and time of exposure?
- ◊ Will gloves be laundered?

Note: Cut resistant gloves and sleeves are not recommended to be used with serrated or moving blades. MCR Safety makes no guarantee or warranty (expressed or implied) of our products' performance or protection for particular applications. The end user is solely responsible for determining the suitability of any product selection for a particular application.

Extreme Cut Hazards	A9: 6,000+ grams to cut
Very High Cut Hazards	A8: 5,000 to 5,999 grams to cut
High Cut Hazards	A7: 4,000 to 4,999 grams to cut
Heavy Cut Hazards	A6: 3,000 to 3,999 grams to cut
Medium to Heavy Cut Hazards	A5: 2,200 to 2,999 grams to cut
Medium Cut Hazards	A4: 1,500 to 2,199 grams to cut
Light to Medium Cut Hazards	A3: 1,000 to 1,499 grams to cut
Light Cut Hazards	A2: 500 to 999 grams to cut
Not Recommended for Cut	A1: 200 to 499 grams to cut

LENS TYPE AND APPLICATIONS

Things to consider when choosing a lens

- Protective eyewear is available in a variety of tinted lenses as well as clear. These tints are not merely decorative, but are designed to enhance the workers vision under various lighting conditions.
- The amount of visible light that passes through each lens and how the lens tint affects vision are important factors in lens selection.
- Luminous (light) transmission, amount of visible light passing through a medium (a lens in this case) is important. The American National Standards Institute (ANSI) provides guidelines for clear and filter plano (non-prescription) lenses in its Z87.1-2015 edition. For instance, the luminous transmission of a clear lens must be between 85% and 100%.
- Noted Styles also meet military Mil-Prf-31013 test regiment for high velocity impact protection
- All styles absorb 99.9% UV radiation.

Lens Coatings

- Duramass[®] Hard Coat—our standard scratch resistant coating
- Duramass[®] Anti-Fog Coatn (AF)—our standard anti-fog coating
- MAX3[™] Hard Coat (P)—three time the scratch resistance than traditional coatings
- MAX6[™] Anti-Fog Coat (PF)—six times the anti-fog properties than traditional coatings
- MAX36 Dual Coat (DC)—Dual “Flow” Coated Max3 outside with Max6 inside
- MaxBlue (MB)—Clear Lens with blue light reduction properties

Clear

- 90% of light is transmitted – the remainder of light is blocked by the coating on the lens.
- Provide excellent optics for general applications.
- Most popular lens because it allows the majority of light to pass through the lens while not distorting the visible color spectrum.
- General purpose providing maximum impact protection and maximum visibility.
- MaxBlue (MB)—Clear Lens with blue light reduction properties

Gray

- 13% of light transmitted.
- Reduces the amount of light that passes through the lens.
- Commonly used in construction or outdoors where sunlight and glare cause eyestrain and fatigue.

Amber

- 80% of light transmitted.
- Excellent for maximum contrast enhancement, particularly in low light situations.
- The amber lens color blocks virtually all blue light to reduce haze and glare making all blue look black or gray.
- The disadvantage is that when you eliminate blue light, you distort color recognition.

Vermilion

- 55% of light transmitted.
- This lens reduces the light proportional to the way your eye sees it. It reduces all colors equally allowing for optimum color recognition.
- It works to reduce brightness while maintaining color.
- Great for electricians, computer applications as well as outdoors where all color must be observed and not distorted.

Indoor/Outdoor Clear Mirror

- 36% of light is transmitted.
- Clear lens with a mirrored coating on the outside.
- Allows more visible light through than other tinted lenses and may be used indoors.
- Best for workers going inside to outside, like forklift drivers, for reducing glare from artificial light such as halogen and florescent. Lens is not transitional.

Orange

- 57% of light is transmitted.
- Reduces eye fatigue by absorbing blue and green light.
- Excellent for indoor and low light applications; cloudy or hazy days.
- Enhances visual contrast to improve depth perception.

Brown

- 13% of light transmitted
- Distinguishes color while reducing glare and brightness for outdoor applications. Meets the traffic signal recognition requirements of ANSI Z80.3.
- Commonly used in construction or outdoors where sunlight and glare cause eyestrain and fatigue.

Light Blue

- 68% of light transmitted.
- Option to Indoor/Outdoor lens.
- Reduces glare from artificial light such as halogen & fluorescent.

Mirror – Gold, Silver, Blue, Fire, Emerald, Blue Diamond, and Black

- 9%-13% of light is transmitted.
- Gray lens with mirrored coating on the outside.
- Commonly used in construction or outdoors where sunlight and glare cause eyestrain and fatigue.
- The “mirror” coating reflects light reducing the amount of light that passes through the lens.

Filter shade lens

- Filter shades lenses protect against ultraviolet and infrared radiation that is generated when working with molten metal and in welding, cutting, soldering, and brazing operations.
- Filter shades are marked with a number on the lens indicating the shade number.
- Available in Green or Gray (true color recognition) lens options
- Filter 2.0 lens 30% of light is transmitted.
- Filter 3.0 lens 12% of light is transmitted.
- Filter 5.0 lens 2% of light is transmitted.

Anti-fog Coating

- Duramass[®] AF and MAX6[™] coatings provide anti-fog, anti-static, anti-scratch, and 99.9% UV prevention.
- To be used in high humidity environments or where sudden shifts in temperature occur.
- Provides excellent fog preventing properties.

Polarized

- Reduction of reflected light (glare)
- Improves optical clarity
- Enhances contrast and depth perception
- Minimizes eye fatigue

MCR Safety recognizes that these are general definitions and recommends you should always consult with your safety director at the facility where the products are to be used to insure the proper application.

482000HAM	Single Matrix Head Gear (482000) w/Single Matrix Clear PETG (486400) Visor	(Sold by each) 6 ea

Acetate (CA) - Well suited for applications requiring the good optical clarity and rigidity. It does not become limp or distort under normal temperatures. Acetate has high impact resistance and withstands crazing or cracking over a wide range of temperatures under normal stress. Acetate is an excellent shield for grease and oils and maintains flexibility over long periods of time.

Glycol Modified Polyethylene Terephthalate (PETG) - Faceshield windows that are made from PETG extruded Co-polyester sheets have performance limitations under specific conditions and in particular environments, which the user should consider. PETG sheet's heat resistance precludes its use in heat generating applications where typical temperatures exceed 140-145° F. While it is a common choice for interior use, its limited UV resistance eliminates it as a potential choice for long-term outdoor applications. PETG windows have a good chemical resistance that make them ideally suited for harsh industrial environments. PETG delivers impact strength and provides some of the advantages of polycarbonate at a lower cost.

Polycarbonate (PC) - Polycarbonate windows are designed for applications demanding high performance properties. This versatile thermoplastic maintains its properties over a wide range of temperatures, from -40° to 240° F for short term application, the melting point being at 310° F. The UL Flammability rating is V-2. It is dimensionally stable, has extreme impact strength, non-glare finish, excellent weathering resistance and high clarity. The Polycarbonate grades used by North Safety Products are UV stabilized and flame retardant. It is optically clear, providing very high luminous transmittance and very low haze factor.

MCR Safety® and Mossy Oak® Brand Camo have teamed up to bring you an amazing line up of Shadow Grass® Blades® gloves and glasses. Shadow Grass® Blades® features a precise arrangement of individual blades of grass, whether wind-blown, broken or bent, onto a background of thatch consisting of lesser or dead grass, to create the perfect pure grass pattern. Carefully placed shadows from the main grass arranged atop the thatch, which incorporates light to dark spots as seen in nature, creates depth that gives Shadow Grass® Blades® a realistic 3D appearance. The USS Defense glasses feature a stylish design with co-injected TPR/polycarbonate temples and TPR nose pads for extreme comfort. The MOUD glasses meet or exceed ANSI Z87+ high impact standard and military ballistic high velocity standard.

Polarized lenses feature a special filtering layer that blocks out reflected light from below and glare from above. By allowing in only direct light, this type lens maximizes the wearer's ability to see while eliminating glare and reflections that would obscure your vision. Common industries requiring this type of lens are fishing, oil rigs, refineries, petrochemical, airports, truck drivers, and snow blowers

Each year eye injuries cost US companies over \$900 million and occur 2000 times each day (Prevent Blindness America). Three out of every five workers injured were not wearing eye protection at the time. Thirty percent (30%) of eye injuries reported happened to industrial equipment operators, assemblers, sanders, and machine operators. Fifty percent (50%) of these injured workers were employed in manufacturing and twenty percent (20%) in construction. Ten to twenty percent (10%-20%) of total work injuries will cause temporary or permanent vision loss. It is estimated that over ninety percent (90%) of those injuries can be prevented with the use of safety glasses (OSHA). Prevent Blindness America has documented over 86,000 people that have avoided vision loss because they wore the proper eye protection.

ANSI/ISEA Z87.1-2015 Standard for Eye and Face Protection

In 2015 ISEA (Industrial Safety Equipment Association) announced changes to the current eye and face protection standard. The ANSI/ISEA Z87.1-2015 establishes performance criteria and testing requirements for devices used to protect the eyes and face from injuries from impact, non-ionizing radiation and chemical exposure in workplaces and schools. It covers all types of protector configurations including spectacles (plano and prescription), goggles, face shields, welding helmets and full face piece respirators.

The earlier versions of the Z87 standard were organized by the type of protector (glasses, goggles, face shields). The 2015 edition is organized by the hazards (impact, dust, splash). These changes will help to encourage employers to look harder at individual applications versus a “one style fits all” approach.

Noticeable changes:

- 1) In the 2003 version eye and face protection was classified as “basic” and “high” impact protection. In the 2015 version they will be classified as either “impact” or “non-impact”.
- 2) Markings will include more information about the classification of the protection for a particular environment. As example, Z87+ for impact and Z87 for non-impact. (see chart)

Type of Mark	Lenses	Frame	Complete device
Manufacturers mark	Yes	Yes	Yes
Non-Impact		Z87	Z87
Impact	Z87+ or +	Z87+	Z87+
Lens Type			
Clear	None		
Welding	W plus shade #		W plus shade #
UV Filter	U plus scale number		U plus scale number
Visible Light Filter	L plus scale number		L plus scale number
Special Purpose	S	S	S
Use			
Splash/ Droplet		D3	D3
Dust		D4	D4
Fine Dust		D5	D5

COMMON APPLICATIONS FOR RAINWEAR AND GARMENTS

Innovative Designs:

Big Jake—Big Jake's reputation for hard working gloves has now been extended to our garments. The Big Jake BJ238JH is a flame resistant jacket made of PVC / Nomex material that will keep you dry and safe from certain thermal hazards. The fluorescent lime background material and two inch silver reflective stripes meet ANSI 107 Class 3 requirements for high visibility protection. It also meets the ASTM F1891 Standard Specification for Arc and Flame Resistant Rainwear. The BJ238JH achieves an HRC2 / CAT2 rating with an Arc Thermal Performance Value (ATPV) of 8.9 cal/cm2.

UltraTech—Quality and Craftsmanship define this ANSI Class 3 rain parka from MCR Safety. Loaded with extras to keep you safe, this jacket features a rugged breathable polyester/PU material for outstanding comfort. Neoprene inner sleeves found inside adjustable hook and loop wrist closures prevent wind and rain blowback. This fluorescent lime/black parka features 2 inch silver reflective stripes and meets ANSI/ISEA 107-2015 Class 3, Type R hi-visibility standards. Available in sizes S-X4.

Vortex—This Premium High-Visibility Insulated Vortex rain jacket is made of the highest quality Rip-stop polyester / polyurethane material for ruggedness and long wear life. It exceeds ANSI Class 3 and CSA Z96 Class 2 requirements to ensure you are seen in low light conditions and complex backgrounds. A double insulated construction is made of a permanent polyester quilted liner covered by a zip out fleece liner that will keep you warm in temperatures ranging from 5° to -27° F. Ten outer pockets, including a clear ID pocket, and two inner pockets provide much needed storage space. The two way front zipper is covered by a storm flap to keep the elements out and warmth in. Stay out of the cold while in the Vortex.

Modacrylic Vests—The Modacrylic blended background material is inherently Flame Resistant and meets ASTM F1506 as well as NFPA 70E. These vests are ANSI/ISEA 107-2015 Class 2 compliant. Some additional features are the 2" FR retro-reflective material and D-ring access for use with fall protection. This material is soft, strong, and resilient and has look and feel of cotton. Applications include utility crews, electrical workers, petrochemical, transportation, ports, road construction, and survey crews.

Aprons and Sleeves (063,073) - 6 & 8 mil Vinyl. Used in meat, poultry, and vegetable processing plants.

Challenger (700) - .16mm PVC/Nylon. Used in amusement parks, golf courses, company recognition, and safety awards.

Classic (200) & Classic Plus (240) - .35mm PVC/Polyester. All around "Classic" foul weather gear, construction industry, utilities, municipalities, airlines, environmental clean-up. Resists most oils, acids, and solvents.

Commodore (600) - .40mm PVC/Non-Woven Polyester/Nylon. All weather suit, provides warmth in winter, absorbs perspiration in summer, protects against industrial oils and solvents.

Concord (800) - .35 mm, Neoprene/Nylon. Mining industry, petroleum related industries, logging and ship building organizations.

Cyclone (400) - .35mm PVC/Nylon/PVC. Limited Flammability, poultry and meat packing plants, concrete plants, any abrasive situation.

Dominator (388) - .42mm PVC/High Tensile Poly/PVC. Limited Flammability, green fabric is quickly identified for chemical applications including chemical plants, refineries, and environmental clean-up.

Hydroblast (390) - .28mm, PVC/Nylon/PVC. Suits specially designed for hydroblasting. Excellent for any clean-up operation. Adjustable closures ensure water tight seals at all openings.

Hydroblast (260) - .35mm, PVC/Polyester. Three piece suit including Jacket, Bib Pants, and Shroud.

Hydroblast (840) - .35 mm, Neoprene/Nylon. Suits specially designed for hydroblasting. Excellent for any clean-up operation. Adjustable closures ensure water tight seals at all openings.

Luminator - High Visibility ANSI 107-2015 rated garments in various fabrics featuring reflective material. Excellent for any application where visibility is top priority, Sanitation Workers, Police, Road Crews, and Airlines.

Navigator (550) - .22mm Polyurethane/Nylon. Limited Flammability, lightweight taffeta fabric.

Squall (070) - .20mm Single Layer PVC. Refinery clean-ups, day labor situations, general maintenance, theme parks, & prisons.

Schooner II Poncho (2000) - .35mm PVC/Poly. Designed for recreational purposes including sporting events, concerts, hunting, and fishing.

Schooner (040) & Schooner Jr. (020) - Schooner O40 is .10 mm PVC and Schooner Jr. is .02 mm Polyethylene. For recreational purposes including sporting events, concerts, hunting and fishing.

Wizard (300) - .28mm PVC/Nylon/PVC. Limited Flammability, chemical protection, fertilizer plants, trucking industry, D.O.T.'s, sanitation workers, and paper mills.

Zodiac (050) - .10mm Single Layer PVC. For light splash protection, day labor situations, and any disposable need.

ANSI/ISEA High Visibility Standard

Approximately every 5 years ANSI/ISEA updates the 107 high visibility standard to improve upon or make any needed changes to make life safer for high risk workers. The standard continues to present three performance classes of garments based on the amount of visible materials and design attributes incorporated into the final configuration, and identifies garment types based on expected use settings and work activities being performed. To comply with ANSI/ISEA 107-2015, a garment's background material, and retroreflective or combined-performance material must be tested by an accredited laboratory.

Fabric and Reflective Requirements Broken Down by Type and Class					
Garment Type Designation	Type "O"		Type "R"		Type "P"
	Off-road	Roadway	Fire, Police, EMS Personnel		
Performance Class	Class 1	Class 2	Class 3	Class 2	Class 3
Background Material Amounts	217 in ²	775 in ²	1240 in ²	450 in ²	775 in ²
Reflective Material Amounts	155 in ²	201 in ²	310 in ²	201 in ²	310 in ²
Width Minimums of Reflective Material	1"	1.38" (1" for split trim designs)	2" (1" for split trim designs)	2" (1" for split trim designs)	2" (1" for split trim designs)
Previous Standard and Class	ANSI 107, Class 1	ANSI 107, Class 2	ANSI 107, Class 3	ANSI 207, PSV	NEW!

*One time setup fee of \$200.00 for glove imprinting program.

*Imprinting available on most leather, cotton, and string styles.

*Additional costs and approvals are necessary on complicated logos or designs. Allow additional time to process.

*The following are average business days to process new orders:

- 5 days for artwork approval,
- 12 days to receive imprints in house, and
- 10 additional days for imprinting on all new imprints

Disclaimer: All private label orders are scheduled to be exact quantity of order. However, we reserve the right to ship and bill overruns of no more than 10% of the order. Prices are subject to change without notice.

GLASSES IMPRINT PROGRAM

Pad Printing on Frames & Lenses

- To insure better quality imprinting, camera-ready artwork or a print ready file is needed with PMS colors.
- All charges are in addition to the cost of product.
- Standard, in-stock ink colors only. Special ink colors by quote only.
- Multi-Color imprinting maximum of four colors.
- If the same imprint will be on both temples, please double the number of imprints and price accordingly.
- If a different imprint is on each temple, the pricing will be calculated per imprint.
- We can imprint on the lens or frame. Specify left or right and upper or lower lens position for logo.
- Lead Time: 2-3 weeks from the date the artwork is approved. Allow an additional 5 days for artwork creation.
- No other set up or plate charges.
- Samples of an imprint: \$100 for 12 pr of imprinted glasses in one color logo.
- Additional samples are \$25.00 per piece and additional colors will be \$25.00 for each color.

Imprinting fees based on **same eyewear style** and **same imprint color**, minimum of 72 pair.

Quantity	Single Color		Multi Color	
72-504 PR	QIMPS1	\$0.65/pr	QIMPM1	\$1.00/pr

 100 case minimum
 Initial order lead time is 12 to 16 weeks
 Reorder lead time is 4 weeks
 Pricing per case of towelettes will be normal column pricing after above art charges are applied.

GENERAL INFORMATION

- MCR Safety sells to distributors only.
- MCR Safety provides same day shipments.
- MCR Safety provides drop shipments at no additional cost, subject to meeting \$500.00 minimum order.
- MCR Safety has special imprinting and boxing available on specified quantities and styles for hand protection, protective eyewear, and protective clothing. (Minimum quantities necessary)
- Customer is responsible for imprinted product after artwork has been approved.
- Satisfaction is guaranteed on all merchandise or it can be returned within 30 days for full credit. (Return authorization required—see below)
- MCR Safety makes no guarantee or warranty (expressed or implied) of our products' performance or protection for particular applications. The end user is solely responsible for determining the suitability of any product selection for a particular application.

TERMS AND CONDITIONS

- Terms are Net 30 days from invoice date, unless otherwise specified.
- Prices F.O.B. our warehouse with handling fee \$.50/ctn on UPS/PS shipments.
- Freight claims and shortages must be recorded on delivery receipt at time of delivery.
- Prices and terms are subject to change without notice.
- Minimum order \$500.00. \$25.00 surcharge on any order less than \$500.00.
- 15% restocking fee on returns. Imprinted product is non-returnable.
- When stored correctly, MCR recommends a shelf life of 2 years from the original manufacturer date for Nitrile and Vinyl gloves. Latex gloves have a shelf life of 1 year and of 6 months for the chlorinated gloves. It is recommended storing disposable gloves in dry conditions and in the original package. MCR Safety will not accept returns of disposable glove orders older than four months.
- For a return, please call 800-955-6887 to request a return authorization number and document this number on your return. Please note that a return is not valid until shipment is received and all items are inspected for proper quantities, packaging, and overall resalable condition. No credit will be issued on any items found non resalable. Arrangements to claim items non returnable must be made within 15 days of notice or items will be discarded. Do not deduct the return dollar amount until a credit invoice has been issued. This RGA is invalid after 30 days of issue.
- We warrant and represent that the goods will conform to their written description and specifications and be free from defects in material and workmanship. No express or implied warranties whether of merchantability or fitness for a particular use shall apply to products sold by us and such warranties are disclaimed. We are not liable for delays in performance of orders or in the delivery of shipments. Customer shall hold MCR Safety harmless from any suits, claims, losses or liabilities made against us arising from any claim of, or infringement of, patent, copyright, trademark or other propriety right resulting from our use, possession, sale or delivery of any goods to the customer in conjunction with their requirements. All transactions shall be governed by the laws of the State of Tennessee and actions or proceedings shall be litigated in the courts of Shelby County, State of Tennessee.
