6121 Farrington Road, Chapel Hill, N.C. 27517
A link to the discounted room registration will be provided following registration.**

Medical Gas Delivery System Generalists (ASSE 6005) certification is designed for those who need general code knowledge. No pre-requisite experience is required. The cost is \$925.00 (includes required codebook, NFPA 99-2024).

Medical Gas Delivery System Installers (ASSE 6010) is a concentrated course providing exposure to all facets of NFPA 99 Medical Gas & Vacuum standard. Candidates are required to have a minimum of four years documented piping experience to take this course. Candidates must have had previous brazing experience. The course will include brazing qualification as well as the written examination. Students are reminded that this course requires after class study to meet specifications and to successfully pass the examination. The tuition cost is \$1350.00 (includes required codebook, NFPA 99-2024).

The Rental of Brazing equipment and purchase of supplies for the brazing qualification and practice are available on request. A list of required brazing supplies and equipment will be provided upon registration. Brazing qualification range is 1/4" to 3" Diameter Pipe. The price for the brazing supplies and rental braze torch with tips is \$250 per individual. The total price for 6010 Installer with brazing supplies/equipment is \$1600 per student.

Medical Gas Delivery System Inspector (ASSE 6020) certification is ideal for government inspectors, construction managers, hospital engineers, project managers, designers, and project estimators. Candidates are required to have two years documented practical experience as a government plumbing/mechanical inspector, or administrator of said inspectors, or regularly involved in the design, inspection, or verification of medical gas systems, or be a 6010 Installer. The tuition cost is \$1020.00 (includes required codebook, NFPA 99-2024). Students are reminded that this course requires after class study to meet specifications and to successfully pass the examination.

Medical Gas and Delivery System Maintenance (ASSE 6040) course is instruction for hospital maintenance personnel who are qualified upon completion to sit for the credential exam. Candidates shall be employed or contracted by a health care facility, be actively engaged in working with medical gas systems, and shall have one (1) year experience in the maintenance of medical gas and vacuum systems. This course covers all the basic maintenance requirements for medical gas and vacuum pipeline and medical gas and vacuum equipment. Its overall emphasis on safety will help you to maintain critical life support systems and to maximize efficiency while minimizing exposure. In addition to basic maintenance and repair requirements, candidates will learn of differing and emerging technologies, how to define manufacturer's test and maintenance requirements, and how to identify all code requirements. Candidates will also receive instruction on what credentials to look for from medical gas contractors and verifiers working in the facility. The tuition cost is \$1020.00 (includes required codebook, NFPA 99-2024). Students are reminded that this course requires after class study to meet specifications and to successfully pass the examination.

If you think you might qualify for the combined ASSE 6010 Installer and the ASSE 6020 Inspector courses, please contact our office directly for verification of qualifications. The cost, if approved, is \$1700.00 per student. Dual Certification with brazing supplies/equipment is \$1950.00 per individual.
