TRAUMATIC BRAIN INJURY
SYSTEM OF SUPPORT

tbisos.org

TBI SOS 4 Kids is a community project designed to obtain input on childhood concussions and traumatic brain injury (TBI) and provide resources that support Texans.

Our goal is to remove barriers to care, build connections and support for parents and school staff, and create a digital platform where the community, parents and youth can ask questions, find resources and seek out care.

4 hubs for TBI SOS 4 Kids in Texas:

We are working to create programs and resources helpful to parents, children & youth, schools, and healthcare to prevent and care for a child with a concussion/TBI.

Awareness/In-Service/Training: We can provide information or training to your organization, youth, clinic, or team about concussion/TBI awareness, protocols, and resources.

Young children 0-5: suffer concussion/TBI but may not express the same symptoms as an older child. We aim to share resources and create support systems for Texans.

TBI Teams: We are looking to partner and create TBI teams in schools to serve as a resource and implement techniques to improve outcomes for students with concussion/TBI. We can provide training in identifying, managing and accommodating students across your school staff.

Share your Story: We want to hear the stories of youth and family caregivers who have experienced concussion or TBI. We want to know how the injury impacted you to inform how we create resources for our community and public policy for a lasting impact.
