

South Elgin, IL Bucky's Renovation

Renovation & Image Modernization

Picture shows the difference between the old finish (to the right) and the new finish above.

Project Summary:

FFS furnished the majority of updated exterior finish veneers shown on this Bucky's Car Wash. The exterior finishes were also upgraded on the Convenience Store. The owner, Buchanan Energy, out of Omaha, NE purchased the FFS exterior finish material directly. The FFS products used were: Walstone Random Pattern in Wyoming White and Mt Airy #0, with Dark Gray resin and the Block Cast Panels in Random Pattern, China White in Sand Finish Texture.

Meet or Exceeding Owners Goals, Values and/or Expectations:

FFS supplied exterior finish materials along with trim and accessories including installation instructions. Due to the schedule, FFS was able to supply an employee to assist with the installation of these finishes. This renovation allowed Buchanan to update this older location to match the new store's exterior finishes. This promotes brand identity through the market place.

FFS Product Used:

Walstone Random Pattern

Blockcast Panels in Random Pattern

Client:

Buchanan Energy
