

Talis Construction has been selected to build a 10' wide dirt utility access road outside the western edge of Las Sendas community. The scope of work will include clearing some existing vegetation and the construction of a stabilized dirt access road with drainage crossings to prohibit dust and erosion. This path will provide City utility crews access to existing manholes for periodic cleaning and maintenance. During construction, the existing trail and access points from the neighborhood will be temporarily CLOSED. Please do not attempt to walk, run or bike in this area until improvements are complete and barricades removed! Please adhere to this temporary closure for your safety.

Construction is slated to begin mid **October 2021** and will last approximately three months.
