Rocks & Minerals 101

Team C has been heavily focused on earth science this year. We began by learning the layers of the earth, then plate tectonics and how landforms were created, earthquakes & volcanoes, and now rocks & minerals. Many students have rock collections of their own that they have kindly brought in to share. Today we will use what we have learned about the properties of minerals to identify some for ourselves! These gems are just one way to see the creativity of our God and the beauty in His creation!

Flour, water and salt. Mmm, delicious! Or maybe not...Students in 5th grade have a new appreciation for those in the military serving in WWI now that they have eaten 'hard tack.' Due to its minimal ingredients, it was a staple of their diets! 🙄

The Read-a-thon is well underway and many students are taking advantage of any opportunity to read more! Students who have been sponsored for at least \$220 so far are enjoying a party this afternoon in honor of their school support. The wonderful thing about this fundraiser is that it encourages students to do something that makes them better students AND it keeps our tuition low. It's a win-win!

Coming Soon!

February Break	February 17th—21st
February 27th	Rocks & minerals quiz
Read-a-thon	Month of February
