

The OPL Children's Room presents...

Every Day's a Holiday

April 28th is International Astronomy Day!

Astronomy is the study of things that exist beyond the Earth. People have been interested in space and the universe for the entirety of human history. Take this day to appreciate the universe and learn a little bit about it!

- What better way to study astronomy is there then to take a few minutes tonight looking at the stars?
- Use a [star map](#) to help you find different objects in the night sky like constellations and planets.
- Check out [NASA.GOV](#). They always have activities to do and will have even more for this special day!
- Need more activities? The McDonald Observatory in Texas has a ton [here](#).
- Check out some fun astronomy themed books from Overdrive like [Midnight on the Moon](#) and [Space](#) by Mary Pope Osborne.
- Or just make some [origami stars](#) for fun.
