Research and Evidence Practice Knowledge and Attitude Survey

This survey is designed to assess knowledge and attitudes toward research and Evidence Based Practice. Please rate your level of agreement with each statement as it applies.

Scale:

5 = Strongly Agree | 4 = Agree | 3 = Neutral | 2 = Disagree | 1 = Strongly Disagree

Question					
1. I understand the steps involved in the evidence-based practice process	1	2	3	4	5
2. I am confident in my ability to critically appraise research articles.	1	2	3	4	5
3. I know how to formulate a question using the PICOT format.	1	2	3	4	5
4. I am familiar with databases and tools used to search for evidence (PubMed, CINAHL)	1	2	3	4	5
5. I can distinguish between high quality and low-quality research evidence.	1	2	3	4	5
6. I believe that evidence-based practice improves patient outcomes.	1	2	3	4	5
7. I am motivated to integrate research findings into my clinical decision-making.	1	2	3	4	5
8. I feel supported by my organization to use evidence-based practice.	1	2	3	4	5
9. I think the EBP is relevant to my daily professional responsibilities.	1	2	3	4	5
10. I am willing to participate in research activities to improve practice.	1	2	3	4	5
Add together the scores from all questions:					

Scoring Guide and Interpretations

42-50	*High Performing*	Keep up the great work! Excellent understanding and positive attitude toward research and EBP.

33-41	*On the Right Track*	Solid foundation: some gaps or inconsistencies remain. There are opportunities to enhance knowledge and integration.
24-32	*Needs Focused Improvement*	Knowledge and attitudes ae inconsistently applied. Invest in education, communication, and engagement
10-23	*Urgent Improvement Needed*	Limited evidence of research and evidence-based practice utilization. Requires strategic focus to build awareness, skills, and consistent use.
