

# Commercialization and the Power of Partnering

Carol Rabke, Ph.D.

Tech to Market (T2M) Advisor - Partnering

# Agenda

- Why is commercialization important
- What goes into a Phase I commercialization plan
  - *Components of a P1 commercialization plan*
    - what should you be thinking about today in terms of the broader picture
    - Importance of customer discovery - *now*
- Partnering
  - *Why necessary*
  - *Types of early-stage partners*
  - *Resources available at DOE*

A blue speech bubble graphic with a white question. The bubble has a dark blue shadow on the left side, giving it a 3D effect. The text is centered within the bubble.

Why is Commercialization  
Important?

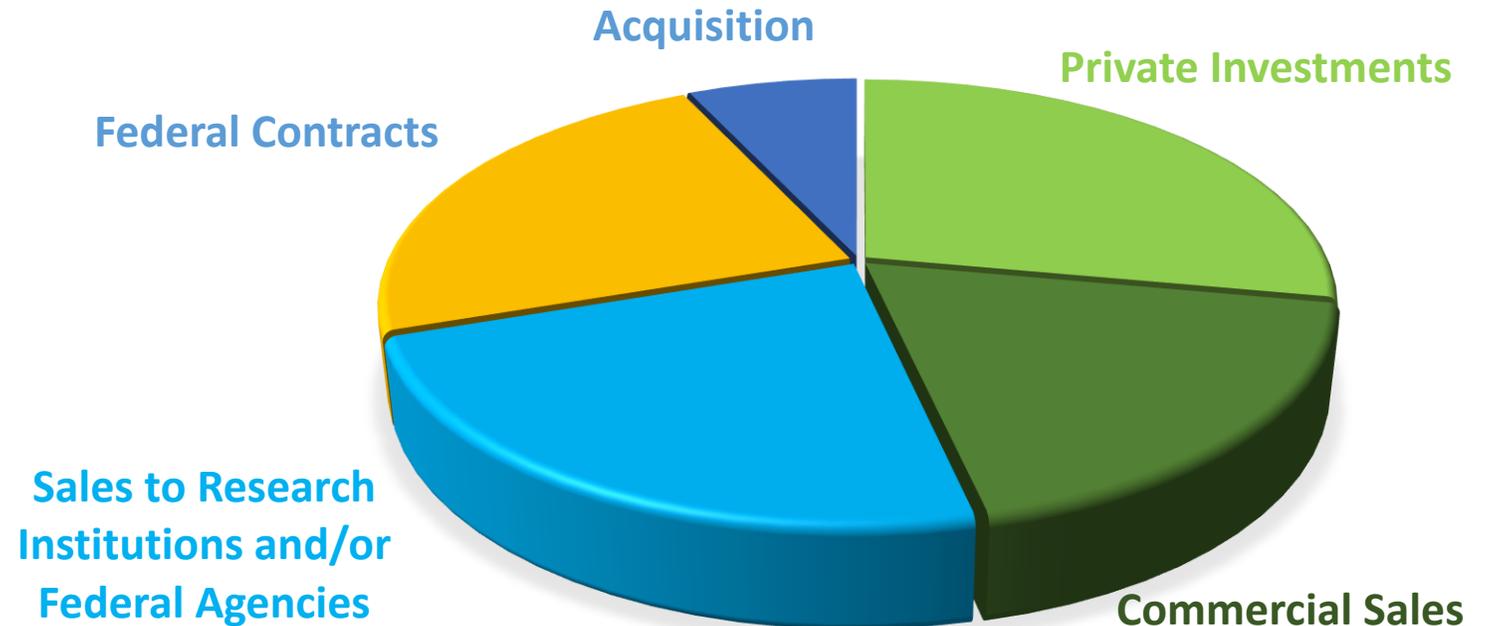

# Commercialization is a statutory goal of the SBIR/STTR programs

- *“Increase private sector commercialization of innovations derived from Federal R-R&D, thereby increasing competition, productivity and economic growth.”*
- Agencies are required to evaluate the commercial potential of R&D conducted under SBIR/STTR.
- “Commercialization” encompasses different aspects of early commercial activity: product launch, licensing, patenting, raising non-SBIR funds.

# Commercialization (Phase III) defined

- *Sale of Product/Service*
- License or acquisition
- Government contract (non-SBIR funds)

# Understand Proposal Review Criteria

1/3

Technical Merit

Significance of commercialization varies by agency.

1/3

Ability to Carry Out the Project

DOE evaluates under IMPACT criteria; even more significance when applying to NSF.

1/3

Impact

Understand the significance of your ***Company Commercialization Report*** and ***Commercialization Plan***

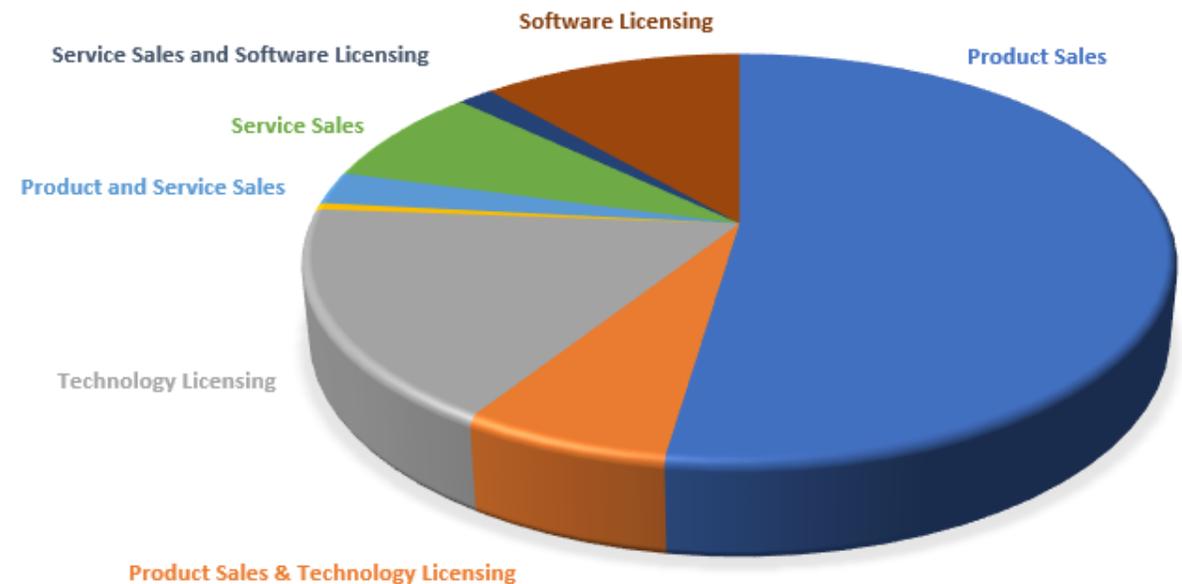

# Myriad of Business Models

Given the diverse technologies supported by the agencies, there are many different business models for revenue generation.

Percentages will vary by agency dependent upon technologies and whether they can be their own customers (mission oriented).

No one “model” fits all; myth that one model is favored over another – figure out which strategy is best for your company and your target industry and provide validation to support your decision.

# Phase I Commercialization Planning

What should you be thinking about *now* for successful commercialization?

# Phase I Commercialization Plans

Although there are similar key elements, available information varies greatly based on the technology and application (target market).

- For those delivering innovative solutions into an existing market, you will be able to find much more information on your market, potential customers and competitors.
- For those delivering new technologies into emerging markets, the market information will be more challenging to obtain or estimate. Competitors may be unknown and/or less known – very few, if any, commercial products might be available today.

# Essential Elements of Commercialization

1. Stakeholders - Customer/End-User; key players; suppliers
2. Value Proposition
3. Market Opportunity
4. Competition
5. Model for Revenue generation (Business Model)
6. Funding for Technology Development  Productization
7. Sustainable Competitive Advantage (IP strategy)
8. Team (***Do you need partners?***)

# DOE Phase I Commercialization Plan Specifications

- Use the [example plan](#) and PI [FOA](#) for guidance; separate 4-page Phase I commercialization plan; 4 individual sections that mirror the DOE Phase II commercialization plan
- Moving from Phase I to Phase II requires you to develop and validate what you suggest in Phase I; taking it from a few pages to 15 pages

# DOE Phase I Specifications

ABC LLC estimates sales revenues of \$XX and licensing revenues of \$XX during the first 10 years of commercialization.

## 1. Market Opportunity

- *Describe the product or service that you plan to bring to market.*
- *Describe your customers and your competitive advantage and/or value proposition for the customer.*
- *Describe anticipated sales with an explanation of the basis of your revenue forecast. (units x anticipated selling price or subscriptions or service).*
- *Describe your competitors (existing and emerging).*
- *Describe any barriers to entry that may limit or slow adoption of new products; such as, test and demonstration requirements, regulatory or other certifications.*

# DOE Phase I Specifications

## 2. Company/Team

- *Describe the capabilities of your team specifically as they relate to the commercialization of your technology; do not repeat their technical qualifications which are covered elsewhere*
- *Include relevant commercialization capabilities of your team that support business model that will be used to generate revenues*
- *Identify weaknesses (maybe you have no personnel with commercialization experience); speak to your time phased plan to address through new hires, strategic partners, consultants; speak to credentials and timing to have in place*

## 3. Intellectual Property

- *Describe both the state of the intellectual property that exists in your intended market and plans to protect your intellectual property.*
- *Review existing patent literature – is your approach novel and not covered by prior art giving you freedom to operate?*
- *Keep in mind that patenting is not required for all markets. There will be markets where trade secrets or copyrights will prove sufficient.*

# DOE Phase I Specifications

## 4. Revenue Forecast

- *ABC LLC estimates sales revenues of \$ and licensing revenues of \$ during the first 10 years of commercialization.*
- *The revenue forecast statement is **mandatory**. DOE asks for estimated revenue during the first 10 years of commercialization because companies vary on when they begin selling product.*
- *Provide assumptions or sales forecasts to validate, if known*

Reviewed as part of **IMPACT** criteria

# Phase I Commercialization Plan MUST HAVES

1. Customer discovery –
  - *Is there anyone out there that needs your solution?*
  - *What are they using now and what are the limitations?*
  - *What are they willing to pay for a solution?*
  - *Who are stakeholders?*
2. Understand your target market and the opportunity.
3. Understand your competition and the industry.
4. Team – often strong technically; put together a time-phased plan to incorporate key business functions if not in place today; ***do you need partners?***
5. Strategy for IP
6. Model for revenue generation
7. Funding Required and where it might come from (early but begin to think about it...)

# Importance of Customer Discovery

*Use customer discovery to answer critical questions for your Phase I proposal*

# Start Customer Discovery Now (Pre-Phase I)

- Use customer discovery to **understand your stakeholders; validate the need** for your technology; and insure you can meet their **price, specifications, and quality requirements** as you start development
  - *Customer*
  - *End-users*
  - *Value Chain/Supply Chain and where **YOU** fit*
- As you develop your Phase I proposal you should know these customers/end-users by name. **Begin developing a relationship** so that by the time you submit a Phase II proposal you can revisit to build and nurture the relationship getting feedback and letters of support where possible.
- Be realistic in your assessment of potential sales; do not assume widespread and immediate adoption of your technology by the entire customer base. Provide a brief explanation of the basis for your revenue forecast – **what did you learn during customer discovery (% that need solution)**
- Competitors may be developing new technology that they are not publicly disclosing. Check publications and presentations – look for collaborations with key players. **Use customer discovery to understand who is supplying solutions today and the limitations. Seek to understand price and customer loyalty where possible.**

# Why Customer Discovery *NOW* –

Use interactions with stakeholders to open the door to relationships that can be nurtured ***over time***. Long-term, some may be ***potential partners***.

- *Can I come back to you in a couple of months to talk to you about progress on a potential solution?*
- *Would you be interested in beta-testing a potential solution?*
- *Does your company provide letters of support?*

**Don't stop** – make customer discovery and interacting with your ecosystem the norm for your company; test and retest hypotheses as you develop new products/services

# Commercialization is Hard...

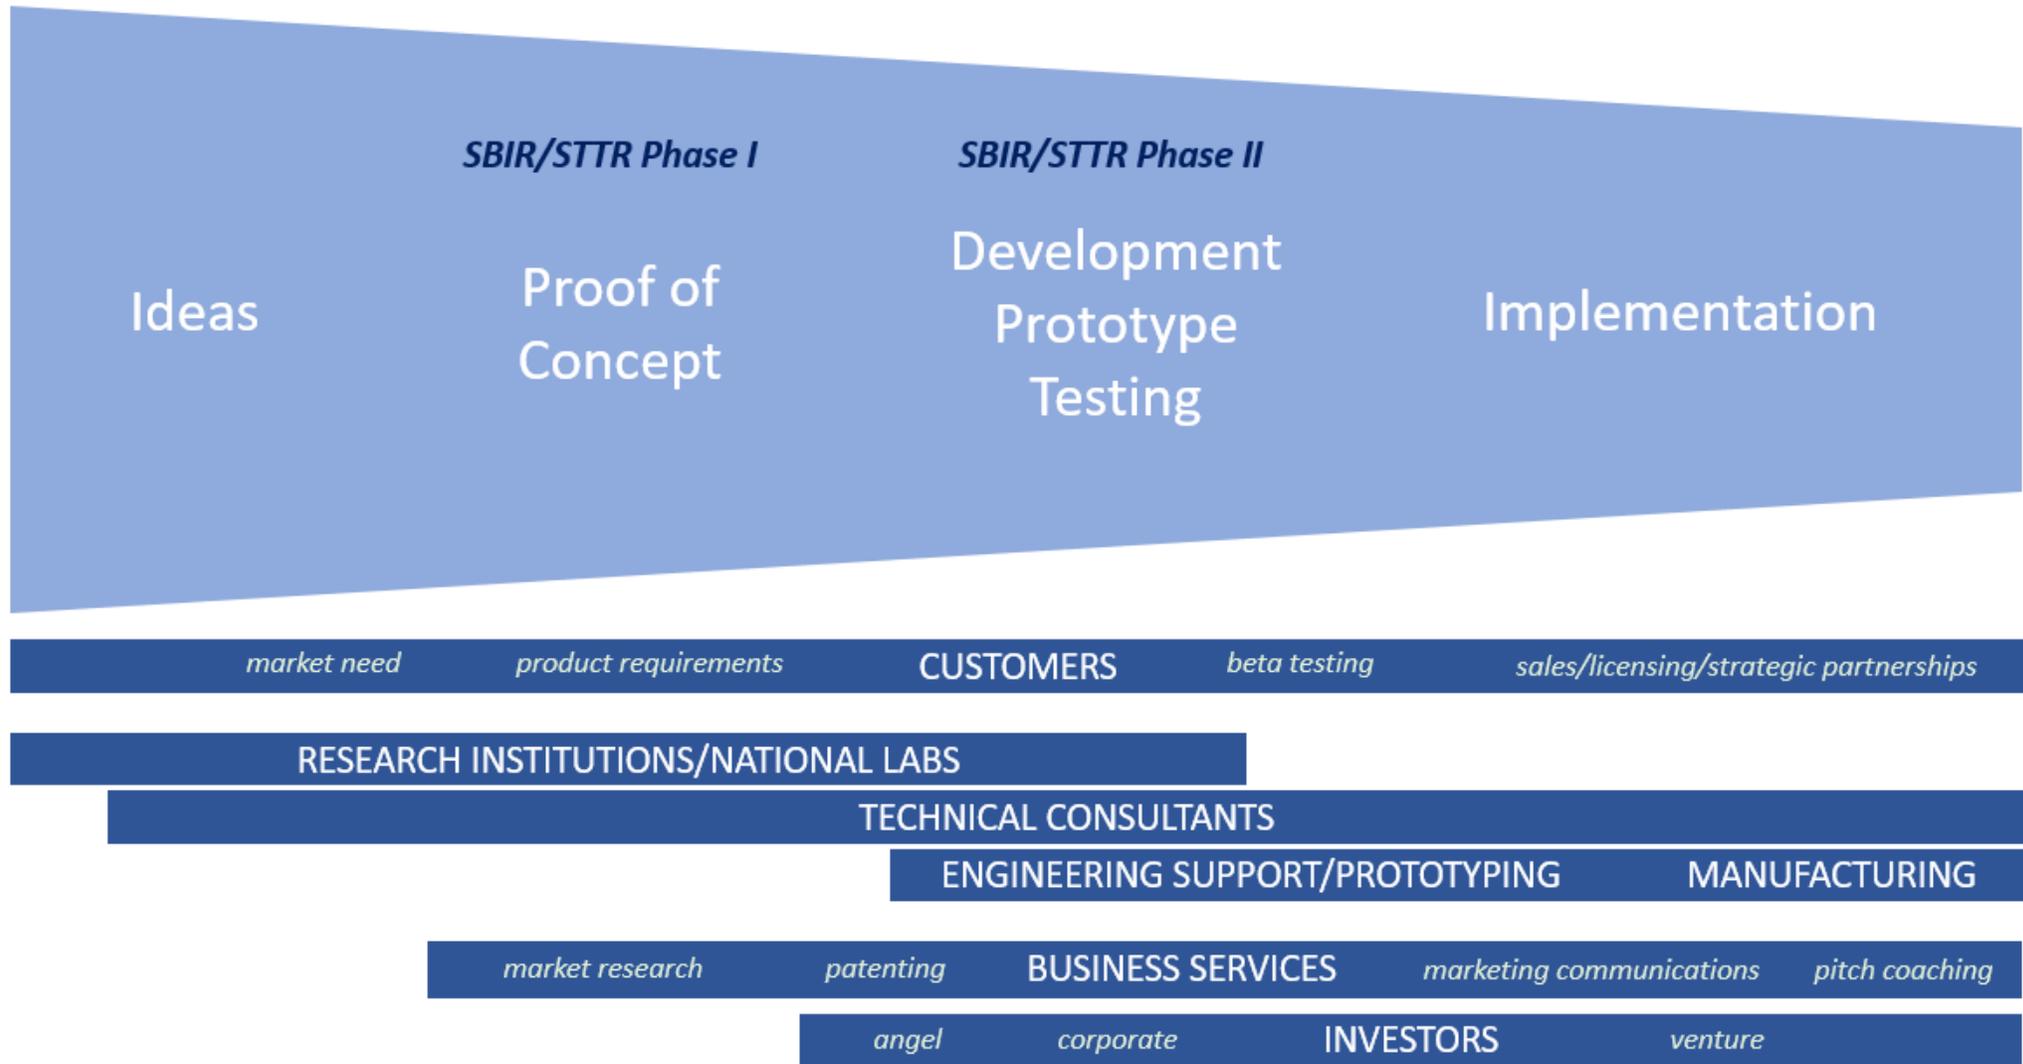

- Directorate provides Technical and Business Assistance (TABAs) funds - \$6.5K in Phase I and \$50K in Phase II
- See the [FOA](#) for specific tasks that can be covered with TABA funds
- DOE has a Phase I commercialization program (vendor vetted by agency); cannot use both TABA funds and participate in program
- DOE has an abbreviated I-Corps program in Phase I - [Energy I-Corps for SBIR](#) to help with customer discovery
- New [partnering resources](#) for applicants and awardees

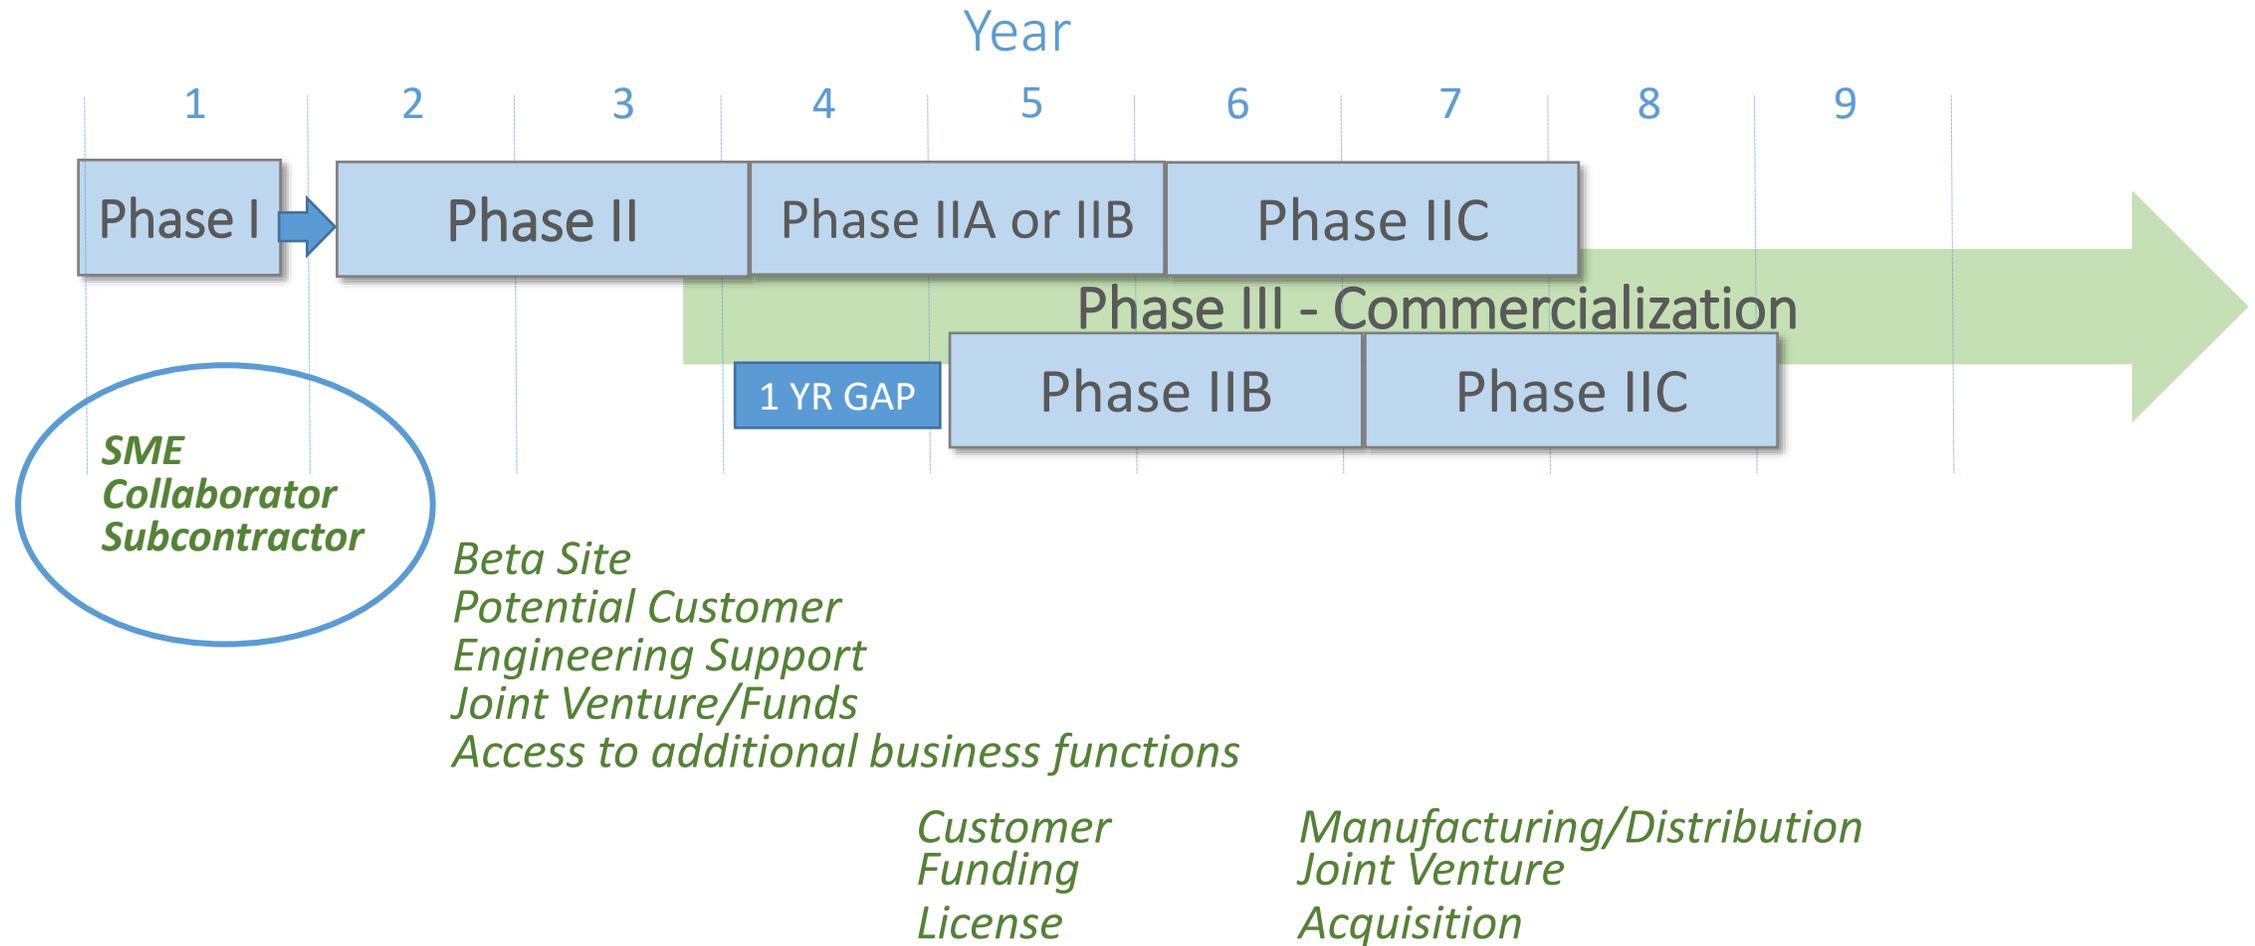

# Discover the Power of Partnering

*Use partnerships to strengthen your proposal and increase your chances of successful commercialization.*
