

SOLUTIONS FOR DRYING & HEATING

Be prepared for cold weather drying conditions.

In colder drying conditions, it's important to utilize the right equipment. Often, the operating temperature range for LGR dehumidifiers is limited to 33°F – 110°F. Desiccant technology is widely used by professional restorers to overcome colder drying conditions. Desiccant dehumidifiers have a much wider temperature operating range, often down to as low as -10°F. Introducing heat to an effected area is another way to maintain an optimal temperature for your equipment to perform efficiently.
