

Closed Loop Dispenser Systems

Streamline Your Cleaning with Safety Express

Safety Express is dedicated to providing innovative, cost-effective, and safe cleaning solutions. We are proud to introduce the Closed Loop Dispenser System—an advanced, no-hassle way to accurately and consistently dilute cleaning concentrates. When you join our Closed Loop Dispenser System Program, you'll receive a seamless and efficient cleaning operation from day one.

Common Challenges in Commercial Cleaning

Inconsistent dilution is often an issue with dispensing systems. Manually measuring often leads to overly strong or weak cleaning solutions, resulting in wasted product or diminished performance. Today's modern closed loop systems with advanced metering technology ensure your cleaning solution is always at the correct ratio—no guesswork, no waste.

Rising operational costs due to product overuse and frequent reordering can cut into budgets. The use of concentrated formulas plus accurate dispensing means you get more cleaning mileage out of every container, reducing long-term costs.

Safety concerns when handling concentrated chemicals can pose health risks to staff and customers. The closed loop design reduces direct contact with chemicals, minimizing spills, accidents, and exposure while meeting stringent health and safety guidelines.

Busy teams rarely have time for complex training & management that often include complicated protocols or extensive product handling. User-friendly dispensers simplify employee training; staff just connect, push a button, and go. No complicated steps, less chance of human error.

These systems also address the challenges of storage and waste. Large inventories of various cleaning solutions clutter storage areas and can expire before use. With fewer products in smaller, highly concentrated forms, the dispenser systems mix on-demand along with eliminating half-empty or wasted bottles.

Closed Loop Dispenser Systems

How the Closed Loop Dispenser System Works

Attach the specialized concentrate containers and the tamper-resistant connectors. Then the cleaning concentrates to the dispenser. Automatic dilution water then flows through an internal metering device, precisely mixing concentrate at the set ratio allowing for ready-to-use output. Collect your perfectly blended solution in a spray bottle, mop bucket, or other receptacle—always consistent, always reliable.

Why Partner with Safety Express?

We provide an exclusive program featuring premium products at the best prices. Rest assured you're getting genuine, high-quality cleaning products backed by factory warranties and expert service. Our knowledgeable team will help assess your cleaning needs and recommend the best product and dispenser configurations.

Program Benefits

We offer an exclusive P&G Pro Total Clean Bundle offer designed to streamline your cleaning operations. By bundling high-performance cleaning products with a complimentary Tytro Pro™ dispenser and professional installation, you can reduce product waste, improve dilution accuracy, and ensure compliance — all while saving on upfront equipment costs.

This program makes it easier than ever to elevate your cleaning standards with minimal hassle and maximum value
