StEER Network Calls for New Members

The Structural Extreme Events Reconnaissance (StEER) Network, would like to formally invite you to join StEER, an NSF-funded initiative to mobilize early reconnaissance missions immediately following major disasters. Note that researchers with little to no experience in field reconnaissance are still welcome to join StEER.

StEER is a more ambitious, nationally-distributed network than the original [University of Florida initiative](#) which started 6 years ago to disseminate information about the effects of wind hazards on the built infrastructure.

For more information about StEER's vision, event responses and products visit, www.steer.network/. To join the StEER network, visit the membership page [here](#) and complete the linked *Membership Application*.

Only official members of StEER will be able to participate in event responses (either as part of VASTs: Virtual Assessment Structural Teams or FASTs: Field Assessment Structural Teams). StEER looks forward to working with you to not only respond to future events but to collectively establish a community-wide vision for structural extreme event reconnaissance, associated data standards and training programs to enhance our collective efforts to Build Resilience through Reconnaissance.
