### NEC2020 Call for Presentations Now Open

If you have expertise in the latest advances in earthquake science, best practices for outreach and education, building science and code advancement, and policy initiatives that improve resilience, FLASH invites you to [submit](#) a presentation for the 2020 National Earthquake Conference (NEC) March 4-6 in San Diego, CA.

[Sponsorship opportunities](#) are now available to spotlight your business and allow you to network with leaders in the earthquake and tsunami preparedness movement. Conference attendees will include academia, building code experts, design/build professionals, FEMA directorates, first responders, geologists, local emergency managers, insurance and reinsurance professionals, local and tribal governments, private-sector interests, public information officers, state government leaders, social science practitioners, U.S. State and Territorial Earthquake Managers, USGS leadership, and volunteers.

Every four years, the NEC brings together seismic stakeholders to address the science, policy, and practical developments in the earthquake and tsunami safety realm. The 2016 conference drew worldwide experts, inspired an immediate increase in financial support for earthquake safety research, and generated an ongoing, global dialogue about challenges the U.S. faces with seismic risk.

Review the [2016 NEC conference outcomes](#), and read the [2016 media impact report](#). If you are interested in undermining this event, click [here](#) to review the sponsorship prospectus. Additionally, click [here](#) to submit a presentation proposal. Stay tuned for more details about registration in the upcoming editions of *Partners in Prevention*.
