

RE: COVID-19 Facility Management Bulletin, Portable Wash Stations

#### QUESTION

### Can UMC install temporary or permanent portable wash stations?

#### ANSWER

### UMC fabricates, delivers and installs custom portable wash stations to support any location.

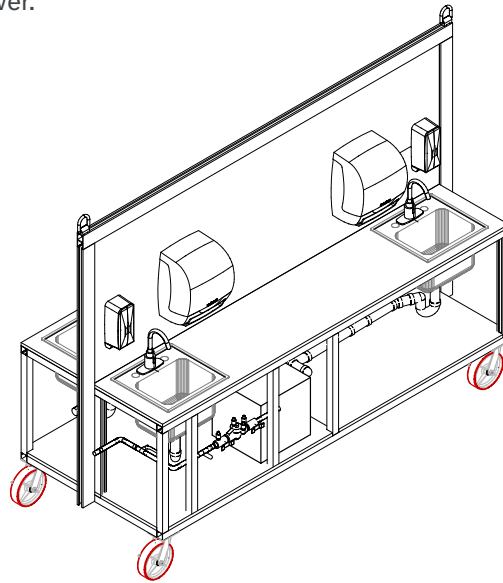

In response to the COVID-19 pandemic and the need for more capacity of functional hand washing stations, UMC has designed and is currently fabricating portable hand wash stations that maintain safe, 6-foot social distancing for four people at a time with a capacity of up to 240 washes per hour. These stations require a 1-1/2" connection to a waste line and a 3/4" connection for cold water and come complete with an electric hot water heater, collection sump, and sump pump. They require a dedicated 15 amp circuit for 120V power.

That sink is fantastic! I hope you don't mind if I share it with our COO. While so much rightful attention is going toward our courageous front line clinicians and staff working to keep us all safe, I want to remind her about what our larger facilities community is doing in the background."
