

DIY Bubble Wands

Supplies:

- Pipe cleaners (assorted colors)
- Beads (assorted colors and sizes)
- Scissors

Homemade Bubble Solution:

- 6 cups of water
- 2 cups of dish soap
- ½ cup of corn syrup or glycerin (helps create stronger and longer-lasting bubbles)
- Optional: food coloring for colorful bubbles

Instructions:

1. Start by taking a pipe cleaner and bending it to your desired wand shape. You can create circles, hearts, stars, or any other shapes your imagination can think of.
2. Then secure the ends by twisting them together, leaving a small loop at the top to act as a handle.
3. Next, thread pony beads onto the pipe cleaner, sliding them down to rest against the twisted end. You can use a single color or mix and match different beads for a vibrant and eye-catching effect. Experiment with different combinations and just have fun!
4. Now that you have your homemade bubble wands, it's time to mix up the bubble solution. Start by mixing the ingredients together gently, taking care not to create too many bubbles in the process.
5. Let the mixture sit for at least an hour before use to allow it to settle and thicken slightly.
6. Now it's time to create some bubble magic! Dip your DIY bubble wand into the homemade solution, making sure the entire shape is coated. Slowly lift the wand and watch as a cascade of shimmering bubbles floats into the air.
7. Let the kids experiment with different blowing techniques and have fun!
