I DID IT BECAUSE

I was initially hesitant about getting the COVID-19 vaccine. However, after doing research and talking to my loved ones, I decided that it was the right thing for me to do. It's important to me that I do my part to ensure my family and community stay safe. I am glad I did it and I feel like I am part of the solution of this public health crisis. If you are hesitant, I encourage you to do research and talk to your doctor and family so like me, you can feel more comfortable making the choice to get vaccinated.
