

Transform the Construction Industry

The world is relying on construction professionals and organizations more than ever before. However, after surveying PMP® holders in the construction industry, **PMI found that 72% of construction-related projects exceed original timelines and 73% end over budget.**

To lead local, national, and global transformation efforts, the construction industry itself—as well as industry professionals—need to transform. As the world's leading project management organization with over 50 years in the space, PMI is in the unique position to equip construction professionals with the skills needed to bring projects of all sizes to life.

Introducing Construction Professional in Built Environment Projects (PMI-CP)™, a certification designed by PMI and industry experts that defines the standard for construction management. With 7 e-learning courses, 3 of which can earn you micro-credentials, and a capstone exam to earn the full certification, the PMI-CP adds a suite of new project management skills to your team to give you an edge over the competition.

Get the blueprint to improved project outcomes.
