

# NEURODIVERSITY, THE BRAIN AND YOUR CHILD'S LEARNING DIFFERENCES

Richard Solomon, PhD

Monday, March 30, 2020

6:30 PM - 8:00 PM

Bishop Connolly Auditorium

373 Elsbree Street, Fall River, MA

In his presentation Dr. Solomon will explain the scientific concept of neurodiversity, or how neurological differences are now respected and recognized as a human variation, not a disability. He explains different learning differences in this context and connects how the brain works and how children learn - or don't. A question and answer period will follow Dr. Solomon's presentation.

## ABOUT DR. SOLOMON:

Dr. Richard Solomon is the Clinical Director of Delta Consultants, a multi-disciplinary clinical practice, located in Providence. Dr. Solomon completes neuropsychological evaluations, child, adolescent and family therapy in his practice and supervises pre and postdoctoral interns and residents. He consults to numerous schools throughout New England and in other parts of the country. He is an Adjunct Professor of Psychology at the University of Rhode Island and the past president of Prevent Child Abuse-Rhode Island. Dr. Solomon presents on neurodiversity and learning differences nationally.
