

# Harvest Safety Tips

1. Use care when operating large machinery near power lines.
2. Inspect the height of equipment to determine clearance.
3. Always keep equipment at least 10 feet away (in all directions) from power lines.
4. Remember to lower extensions when moving loads.
5. Use a spotter to maintain safe distances from power lines and other equipment when doing field work.
6. If a power line is sagging or looks to be dangerously low, please call CCPPD immediately.
