

# MEDIGATE

## Common Procurement Platform

CHAI in partnership with Intent Health Technologies had rolled out 'Medigate', a common procurement platform for its member institutions. The Medigate portal enables members to procure pharmaceutical products and consumables including all kinds of personal protective equipment (delivered in the form of well thought out kits) and provides an easy to use interface for member institutions to connect with suppliers. The portal delivers value to members by allowing them to onboard their own vendors with who they might have entered into preferred price contracts-thereby enforcing transparency, compare prices offered by other vendors who may be offering more attractive prices, and do all this with just a few clicks. The Medigate portal has been a key component in the CHAI project to support Mis with supply of PPE kits by enabling a very transparent process.

- 1 Member Institutions register their hospitals on the Medigate portal.**
- 2 Member Institutions place orders, thereby generating a purchase order which is instantly shared with the vendor and the Member Institutions on their registered Email ids.**
- 3 Vendors confirm Purchase Orders.**
- 4 Member Institutions receive the information of the logistics and the tentative date of delivery of the goods.**
- 5 Vendors generate invoices which are uploaded in the portal, upon which Member Institutions can make payments via online transactions.**
