

UNIVERSITY OF ROCHESTER MEDICAL CENTER

CHIEF, DIVISION OF INFECTIOUS DISEASES

THEY ARE A NATIONAL LEADER IN TRANSLATIONAL RESEARCH AND INFECTIOUS DISEASES

“We are committed to recruit a strong academic physician leader as the next Chief of the Division of Infectious Disease at the University of Rochester Medical Center. Substantial resources are available for the new Division Chief to successfully recruit new clinical and research faculty. The Chief will be asked to develop new programs that will build on and complement the division’s current research efforts including vaccine biology, HIV, antimicrobial resistance and the microbiome. The successful candidate will also have the opportunity to expand our clinical programs with the goal of better meeting the infectious disease needs of our multi-hospital health system.” Dr. Paul Levy, Chair Department of Medicine

THRIVING, MULTI-MILLION DOLLAR RESEARCH PROGRAM

This is an exciting opportunity to step in to lead an established, historic, academic practice. The Division of Infectious Diseases has been at the forefront of clinical and translational research with a rich history of vaccine research. The research portfolios include major well-funded research programs in HIV, RSV, Influenza, and other bacterial and viral respiratory pathogens with a focus on vaccine development, clinical trials, and translational research.

Their research efforts have developed in the context of an extraordinarily productive, collaborative relationship with investigators in the Center for Vaccine Biology and Immunology (CVBI), the Department of Microbiology and Immunology, and the Division of Allergy, Immunology, and Rheumatology. The institutional commitment to research in ID and immunology is reflected by the recently commissioned initiative to create a new Translational Immunology and Infectious Disease Institute.

PRACTICE HIGHLIGHTS

- Lead the clinical practice, the academic enterprise, and the research programs of this large division.
- Advance various multidisciplinary initiatives across the school and throughout the hospital and hospital partners.
- Lead a faculty group (currently 17) located in an 830-bed tertiary care teaching hospital, Strong Memorial.
- The Division provides full spectrum care including transplant infectious diseases services.
- Division is home to an active outpatient practice including supervision of approximately 600 patients on Outpatient Parenteral Antibiotic Therapy (OPAT) and operates a PCMH practice for approximately 1,200 persons with HIV at the NYSDOH designated AIDS Center.
