

# Director of Lung Cancer Research

## Inova

- [Academic Medicine](#)
- [Adult Hospital](#)
- Location: Fairfax, DC

Inova Health System is seeking a Director of Lung Cancer Research to serve the Inova Schar Cancer Institute. Recognizing both the growth in population throughout the district served by [Inova](#) and the increase in cancer patients that corresponds with that growth, the Inova Schar Cancer Institute was established in 2015 with \$400M of funding, including a single \$50M philanthropy grant. The highly personalized 280,000-square-foot Institute sits on an innovation campus that spans 117 acres and is an international center for advanced cancer care and research. Collaborating with clinical and scientific partners, including the University of Virginia as well as industry, this program prioritizes genomic and translational research to better understand, predict, prevent, and eliminate cancer. [Inova Schar Cancer Institute](#), with access points at all five Inova hospitals, is at the forefront of cancer diagnosis and treatment. Inova's new lung cancer program offers care for patients in a multidisciplinary clinic. Inova physicians are actively involved in cancer research, helping develop new treatments to improve patient care.

## Position Overview

The Director of Lung Cancer Research at the Inova Schar Cancer Institute will conduct an active program of independent and collaborative research pertinent to the mission of the Institute, work

with a multi-disciplinary group of investigators at Inova and develop vibrant research collaborations aimed at having a local, national and international impact on cancer prevention and control. The successful candidate will be an outstanding clinical/translational physician investigator with expertise in the care of lung malignancies, and with the ability and personal characteristics to direct the development of an outstanding interdisciplinary clinical lung cancer program. The successful candidate will build, maintain, and continually improve an outstanding academic program for the care of patients with lung cancer, and for those who work and learn within the program.

## **Qualifications**

- Board certification in Internal Medicine and Medical Oncology, specialized expertise in lung oncology.
- Eligibility for Virginia licensure as a medical doctor.
- Eligible for the academic rank of associate of full professor.
- Prior experience in a tertiary regional hospital or academic institution with a comprehensive cancer clinical and research program. Evidence of past participation in publication of articles on basic, translational, and/or clinical cancer care.
- Experience and expertise in research including Phase 1 and early Phase II clinical trials.
