

Tech Team report of 6/29/2025

With the start of the summer season and the need to turn on the A/C units, the louder ambient noise in the sanctuary poses a challenge to obtain the proper sound levels to hear the person speaking during the service, i.e. pastor, liturgist, etc. This was very noticeable during the June 15 service. Tony has been able to adjust the sound board controls, among other things, to compensate for the noise created by the A/C units.

Became aware that the June 22 service was not "live streaming" through Facebook, even though the live service was viewable through the church website. Chris was to add the recorded version to the church's Facebook account. We will need to look further into this situation and make any needed changes.

The unpredictable loss of the video signal continues; the screens will usually black out temporarily or only the main (Sanctuary) screens. Still unable to re-create the problem, thus it is difficult to isolate the problem to cable(s) and/or video component(s).

Respectfully submitted,
Ray Jauregui
