

1

Royal jelly isn't the whole story.

For years, scientists believed a queen bee was created simply by feeding a larva royal jelly. New research shows that's only part of the process.

2

A queen is raised in a custom-built nursery.

Future queens develop inside specially designed queen cells made from unique wax that better retains warmth and moisture, creating the ideal environment for her growth.

3

It takes an entire colony to create a queen.

The influence of customised surroundings, social interactions and expert nurture is critical in shaping how a queen bee develops.

LET'S TALK ABOUT

How Queen Bees Are Made

The World Bee Project

Protecting Pollinators,
People & the Planet

The World Bee Project is the first initiative of its kind that uses really smart monitoring technology, kind of like robot brains, to watch over bees and their environment. We do this to find ways to help nature and people for a long, long time.
