

1

Leaves aren't just for photosynthesis

Some plants can absorb nutrients like iron and manganese directly through their leaves.

2

Dust can be nutritious

Dust from deserts carries nutrients that some plants absorb through their leaves.

3

Leaves can outperform roots

On leaf surfaces, nutrients face less competition than in soil, making absorption surprisingly efficient.

LET'S TALK ABOUT

How Plants Feed Beyond Their Roots

The World Bee Project

Protecting Pollinators,
People & the Planet

The World Bee Project is the first initiative of its kind that uses really smart monitoring technology, kind of like robot brains, to watch over bees and their environment. We do this to find ways to help nature and people for a long, long time.
