We're celebrating National Library Week – April 4 to 10!

Join us at this NASA@My Library virtual event with local boy Dr. Jesse Tarnas, a member of the Science Team for the Perseverance Mars rover. Tarnas will talk about the recently-landed Perseverance Mars rover mission and what it means for science and the future of humans in space. He'll describe his journey from Waimea on the island of Hawaii, to NASA's Jet Propulsion Laboratory, including some adventures along the way, e.g., studying ancient water 1.5 miles underground! Dr. Tarnas, a Parker School alumnus, recently earned his Ph.D. in Planetary Science from Brown University and spends his work days researching planets. His team's goal is to find alien life and to help humans live on other planets and moons.

This free Zoom event is suitable for ages 9+.
