NETWORK ENGINEER IN ROCKVILLE, MD

Job Description

Responsibilities:

- determine user requirements and design specifications for computer networks
- planning and implementing network upgrades
- Adjust network sizes to meet volume or capacity demands
- Communicate with customers, sales staff, or marketing staff to determine customer needs
- Develop and implement solutions for network problems
- Coordinate network operations, maintenance, repairs or upgrades
- Design, build, or operate equipment configuration prototypes, including network hardware, software, servers, or server operation systems

Qualifications:

- 5-7 years experience experience
- Network/systems administration/related work
- Knowledge of computer hardware as it relates to data storage
- Knowledge of computer software, such as configuration management software, desktop communications software, operating system software and internet directory services software
- Excellent analytical skills, organizational, time management and problem solving skills are essential
- Excellent oral and written communication skills including ability to interact effectively with executives, vendors and department staff
- Verbal communication skills required as this position requires some interaction with requestors (usually application and technical project teams) and the network and firewall out sourcers technical staff

Nice to haves:

- Experience in Python/Shell scripting, familiar with network management tools like NAGIOS, SevOne, Infoblox are highly valued

- Experience with Palo Alto Firewalls or Cisco Firewalls or AWS cloud networking
- Cisco Certified Network Professional (CCNP) certification

Please keep in mind this in a true engineer role and not operational
