# SECURITY
# ENGINEER IN WASHINGTON, DC

The technical landscape consists of:  All candidates have to have recent relevant cyber security experience, and all should be able to speak at a senior leader level. We will be participating in decision briefs and vetting new solutions as the program matures. We will be part of integrated project teams that will work across all 4 divisions of OIT.

Additionally, the candidate has to be more experienced than a system admin performing tasks such as maintaining and patching servers, troubleshooting issues, network port assignments and using pre-existing services (e.g., creation/deletion of AWS instances, storage allocation, etc.).

This is a 6-month contract to hire with a base salary upon conversion up to $150,000 based on experience.

## Job Requirements

- A *minimum of eight (8) years of relevant work experience* in the area of information/cyber security engineering or operations, including hands-on experience with security tools and devices such as network firewalls, web proxy, intrusion prevention system, vulnerability scanner, and penetration testing tools.

- *Two (2) or more years* of experience in designing, architecting, and implementing security controls and securing enterprise-wide systems, applications, network, and infrastructure services.

- Specialization in the following fields with *four (4) or more years of experience*:

- Building and administering security devices such as network firewall, web proxy, data loss prevention systems, and intrusion prevention systems.
- Building and administering Network devices (e.g., Cisco, Juniper)
- Conducting dynamic web application security testing, both manual testing and utilizing application security tools to discover exploitable vulnerabilities.
- Conducting database security assessment and monitoring.
- Experience with public cloud services providers such as Amazon AWS or Microsoft Azure.

*Strong familiarity with Federal compliance standards such as NIST 800-53, FIPS, FedRAMP.*
