ChargePoint Express Plus

Charge more vehicles, faster, with Express Plus.

Express Plus (EXPP) was designed to meet the global requirements for DC fast charging today and well into the future with a software-defined DC hardware architecture that grows with demand.

Express Plus installations can start small and scale as demands on the site change. Upgrading the site to get the highest charging capacity in the industry is done without any stranded investment by adding Express Plus Power Modules, Express Plus Power Blocks and Express Plus Power Link stations to meet the demand.

Key Features

Scalability and Speed: Express Plus is capable of delivering up to 350 kW to a single vehicle. The modular architecture of the platform ensures that an installation can scale as demand for power and ports increases.

Usability and Experience: The Express Plus platform is designed to be easy to use by all types of drivers as well as easy to own and operate for all businesses.

Cost-Effective Operations: Station owners can start small and expand to the highest charging capacity in the industry without any stranded investment by adding EXPP Power Modules, EXPP Power Blocks and EXPP Power Links as demand increases. High-efficiency power conversion (> 95% efficiency) reduces electricity costs and wasted energy.

Universal Compatibility: Any EV with fast charging capabilities can be accommodated with EXPP Power Links designed to meet the need of the installation site.

Serviceability and Maintenance: Modular components are field installable without any specialized tools or expertise. Minimal moving parts and liquid cooling technology increase reliability and minimize ongoing field service for maintenance.

High Availability: ChargePoint support monitors EXPP Power Modules and stations remotely 24/7. Intelligent machine learning techniques predictively prevent failures and ensure stations are always available for drivers.

Get Ready for the Next 10 Years in EV Charging

Express Plus Configurations

ChargePoint Express Plus is a platform that is configured to site needs using modular building blocks — EXPP Power Modules, EXPP Power Blocks and EXPP Power Links . Our team will work with you to determine the configuration that best meets the requirements at any site and how to scale the site incrementally as demand for charging increases.

The Network Effect

When you choose ChargePoint Express Plus, you don't just get the most advanced DC fast technology in the industry, you also get access to cloud services that let you:

Set specialized pricing policies and access controls

Make your stations and their status visible to hundreds of thousands of EV drivers on the ChargePoint network

Generate usage and energy reports

Get over-the-air updates to system software so the latest capabilities are always available

Sit back and relax with industry leading service and support for your stations and your drivers
