

Compost and soil moisture field day

Visit the Greater Sydney Local Land Services' (GS LLS) Demonstration Farm and learn how compost made from recycled organics affects soil moisture content over the growing season.

GS LLS, MRA Consulting, and Agnov8 invite you to the Demonstration Farm to learn about how compost impacts soil water retention and could reduce your requirements for crop irrigation.

At this workshop, you will:

- Walk through the GS LLS Demonstration Farm and see the EPA funded compost trial crops
- Discuss the impacts of using compost on soil moisture content
- Hear about the results of current compost trials
- Speak to compost producers and suppliers
- Speak to farmers currently using compost as part of their farming practices
- Enjoy a BBQ lunch

Details

When: Friday 13th March, 12pm – 3pm (lunch included)

Where: Greater Sydney Local Land Services Demonstration Farm, 40 Edwards Rd, Richmond Lowlands

Register: on <http://bit.ly/3bF9H0S> or

RSVP at (02) 8541 6169; organics@mraconsulting.com.au

This project was supported by the NSW EPA as part of the Waste Less, Recycle More program funded through the waste levy.
