

KYNZLEE DAWN GINGERICH

DAUGHTER OF NORMAN GINGERICH AND BAYLEE SANGSTER

Donations needed for a benefit auction for this precious baby girl she has an extremely rare gene disorder called setd1a which is causing multiple issues. Kynzlee is currently being tube fed and still isn't gaining very many nutrients, she is 10 months old and weighs 12 pounds she has hypotonia and is hypoglycemia so the pituitary gland does not tell her insulin to release which causes low blood sugars they have put her on a growth hormone shot this still isn't fixing the low sugars. Children's Mercy and Saint Washington University clinic are both trying to work together to help this baby and are not sure quite how to help her there has only been 1 other person in the world diagnosed with this gene disorder and the symptoms are not the same which means many trips to KC and St. Louis for testing.
