

Bureau of Automotive Repair

Automotive Repair and Smog Check News - Fall 2019

Advanced Vehicle Safety Technologies

Vehicle manufacturers are rapidly introducing advanced vehicle safety technologies. These safety technologies include vehicle collision management systems to protect occupants in the event of a collision and Advanced Driver Assistance Systems (ADAS) to help avoid and mitigate the severity of collisions. In many instances, repairing vehicles with advanced safety technologies requires specific equipment, procedures, and materials. With vehicle safety technology standard on many vehicles, and the introduction of new technologies, the need to follow service specifications and procedures will be paramount to repairing these advanced systems.

To stay ahead of the advances in vehicle technology repair requirements, the Bureau of Automotive Repair's (BAR's) Technical Training Unit developed a Structural Damage Analysis (SDA) training course for its program representatives. SDA training is a week-long, hands-on class relating to vehicle safety technology and collision management system advancements. SDA training was developed to address the changing vehicle structural designs by the manufacturers, which can be specific by vehicle year, make, and model.

Program representatives are taught how to inspect and identify collision energy as it travels through the vehicle. Additional training topics include airbag timing and function, inspection of ADAS, steel properties, sectioning procedures, aluminum repairs, carbon fiber repairs, bonding adhesives, windshield replacement, and welding types, along with their applications and materials.

Pictured: BAR program representatives examining vehicle components on a full-body module.

During the SDA training, each program representative is assigned a damaged section of a vehicle module that has been in a collision. The vehicle module is placed on a rotisserie-like device to inspect it, allowing a 360-degree view of the damage. Program representatives identify structural damage, conduct an in-depth analysis of the structure that has been compromised by the impact, photograph identified issues, establish appropriate repair techniques, and present their findings to the class.

Pictured: Advanced technology steel module showing different ratings of steel, weld points, and floor reinforcements.

Pictured: Advanced technology module on a rotisserie-like device allowing the program representatives to learn appropriate repair techniques of the advanced vehicle safety technologies and engineering advances.

SDA training provides program representatives the resources to ensure the proper repair of advanced vehicle safety systems and educate the industry and consumers regarding these repairs. BAR will continue to develop and implement training for its program representatives as the underlying technologies continue to evolve. New regulations are also being developed to address the changes in vehicle technology and resulting repair practices.

Automotive repair dealers (ARDs) should be aware of the specific service specifications and requirements to ensure consumers obtain a proper and safe repair. Some ARDs are performing vehicle technology/structural repairs or services internally, while others are subletting the repairs or services to outside vendors. In either case, ARDs are required to adhere to service specifications, accepted trade standards, and the Automotive Repair Act and related laws and regulations. Specifically, California Code of Regulations, title 16, section 3365(a), requires that:

Repair procedures including but not limited to the sectioning of components parts, shall be performed in accordance with OEM service specifications or nationally distributed and periodically updated service specifications that are generally accepted by the autobody repair industry.

Permanent Diagnostic Trouble Codes

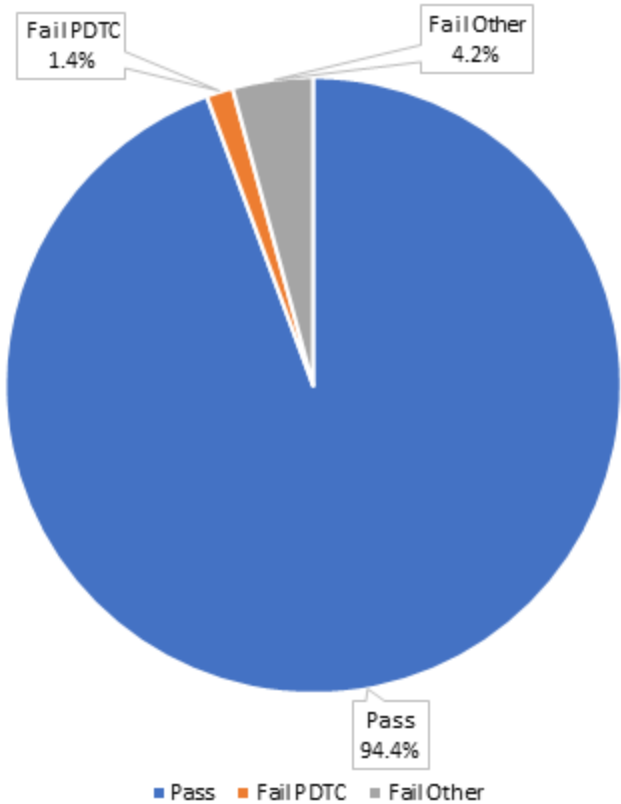

On July 1, 2019, the Bureau of Automotive Repair (BAR) incorporated Permanent Diagnostic Trouble Codes (PDTCs) as part of the Smog Check failure criteria for model-year 2010 and newer vehicles. This change fulfills the requirements of California Code of Regulations, title 16, section 3340.42.2(c)(5).

PDTCs are very similar to regular Diagnostic Trouble Codes (DTCs). However, unlike regular DTCs, they cannot be reset by disconnecting the vehicle's battery or cleared using an On-Board Diagnostic (OBD) scan tool. The only way to clear a PDTC is to fix the underlying problem that originally caused the PDTC and its corresponding DTC to set, and then allow the vehicle enough drive time to re-run the monitor that identified the problem in the first place. When the monitor runs without identifying a problem, the PDTC will clear itself.

PDTC issues are ignored only after the vehicle has completed at least 15 warm-up cycles and been driven at least 200 miles since its OBD information was last cleared. The 15/200 limit is being established to prevent undue inconvenience to motorists who are trying to comply with the Smog Check Program requirements but are having trouble getting specific monitors to run to completion and ready for testing. Most vehicles will complete the self-diagnostic tests well before the 15/200 maximum limit is reached. A warm-up cycle means driving a vehicle so that the engine coolant temperature rises by at least 40 degrees Fahrenheit after the engine is started and reaches at least 160 degrees Fahrenheit.

During the first month of implementation, 3,124 vehicles failed for PDTCs that would have previously passed a Smog Check inspection. These vehicles all had recent codes cleared and a PDTC stored in the computer's memory. Including PDTCs as part of the failure criteria for model-year 2010 and newer vehicles raised the failure rate on these vehicles from 4.2% to 5.6% as shown in the following figure.

**Test Results - Model-Year 2010 and Newer Vehicles
Tested in July 2019**

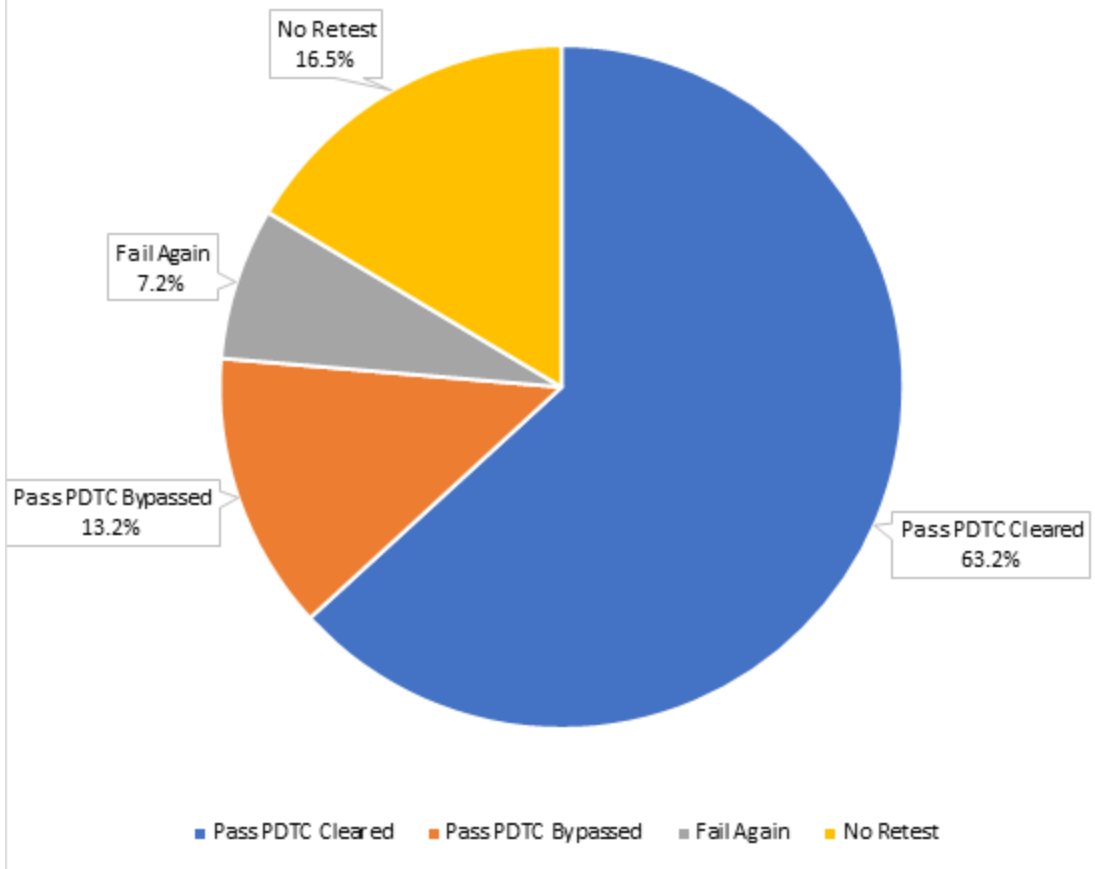

The top PDTC for each fuel type is shown in the following table:

Fuel	PDTC	Description
Gasoline/Flex	P0442 and P0456	EVAP system leak
Diesel	P21DD	Reductant tank heater circuit
Hybrid	P0A80	Replace hybrid / EV battery pack

In September, BAR re-examined the test records for these vehicles to determine their after-failure outcomes. Of the 3,124 vehicles that failed inspection due to a PDTC, 2,385 passed a subsequent re-inspection and were issued a certificate. Of the 2,385 vehicles that passed their re-inspection, 1,974 had a PDTC that was appropriately cleared by the vehicle’s OBD system. Another 411 vehicles still had a PDTC but passed their re-inspection because they met the 15 warm-up cycle/200-mile limit. The results are shown in the following table and figure.

Category	Count	Percent
Total PDTC failures	3,124	100%
Retested and passed – OBD system cleared the PDTC	1,974	63.2%
Retested and passed – PDTC still present but 15 warmup cycles were completed, and 200 miles had been driven	411	13.20%
No subsequent test conducted since PDTC failure	514	16.50%
Retested and failed again	225	7.20%

Failing Vehicle Outcomes as of August 31, 2019

For more information, visit the PDTCs

(https://www.bar.ca.gov/Industry/Industry_Resources/Permanent_Diagnostic_Trouble_Codes.aspx) page at www.bar.ca.gov (<https://www.bar.ca.gov/>).

Smog Check Station Enrollment with OnCore

The Bureau of Automotive Repair's (BAR's) contract with SGS Testcom supporting the maintenance and operations (M&O) of the California Vehicle Inspection System (Cal-VIS) expired on October 31, 2019. Following a competitive bidding process, the M&O contract was awarded to OnCore Consulting LLC (OnCore). The new contract reduces the Smog Check communication fee assessed to stations from \$1.08 per inspection to \$0.7036 per inspection, a 35% reduction. The fee reduction took effect on November 1, 2019.

In collaboration with BAR, OnCore began a station enrollment outreach campaign in September 2019. During this time, Smog Check station owners were mailed information containing station enrollment instructions. Stations can quickly and securely complete the enrollment process entirely online, including entering banking information into the new Cal-VIS billing system.

The fully electronic test fee billing process allows station owners to review, download, and print monthly invoices directly from the Cal-VIS billing system. The Cal-VIS billing system includes automatic payments via pre-authorized electronic bank-to-bank funds transfers governed by the National Automated Clearing House Association (NACHA). These bank-to-bank fund transfers can be set up for both Smog Check test fees and certificate purchases.

Station owners with questions regarding enrollment activities or the new Cal-VIS billing system may contact the Cal-VIS Billing Help Desk at (888) 229-9389. For questions regarding the transition to OnCore, please contact the BAR Industry Help Desk at (866) 860-8509.

Updated BAR-97 Equipment

The BAR-97 Emissions Inspection System (EIS) specification is being updated in two phases. The first phase of the update was completed on November 1, 2018, when BAR-97 EIS analyzers were transitioned from connecting to the vehicle information database (VID) through a dedicated dial-up phone line to internet-based communication. The second phase of the update integrates data from the Low Pressure Fuel Evaporative Tester (LPFET) into the BAR-97 EIS test record for transmittal to the VID as one communication. The BAR-97 EIS will no longer need a dedicated dial-up phone line. Implementation of the second phase of the BAR-97 EIS specification is underway and will continue into Fall 2019. BAR will continue to send ET Blasts to stations to provide updates on the implementation process.

Government Vehicle Smog Checks

Approximately 450,000 government vehicles are operating in California. These vehicles require the same Smog Check inspection as privately-owned vehicles. However, the information entered into the analyzer differs. Below are some tips and procedures for testing government vehicles.

- All government agencies are issued a unique BAR file number, also known as a fleet file number. This number is alphanumeric, with two letters followed by six numbers, and is required for the technician to perform the test. If the customer does not know their fleet file number, contact the BAR Fleets Unit at (916) 403-0313.
- Federal vehicles are usually registered in Washington, D.C. Select the District of Columbia (DC) as the issuing state for the vehicle's registration.
- Some government license plate numbers exceed seven digits. Enter only the last seven digits into the analyzer.

BAR-OIS

- When entering vehicle information, respond "Yes" to the question "Is this a Government Fleet, Business Fleet, or permanent Fleet Vehicle?"
- Enter the fleet file number when prompted. A message will be displayed indicating no certificate will be issued. Select "OK."

BAR-97 - OPUS

- When entering vehicle information, select "Government Fleet Vehicle" from the vehicle type dropdown menu.
- A message will be displayed indicating no certificate will be issued. Select "OK."
- Enter the fleet file number when prompted. The first letter ("G") will be prepopulated on the screen.

BAR-97 - Worldwide

- On the vehicle information screen, verify that the vehicle type is "G". If not, answer "No" to the question "Are all entries correct?" Change the vehicle type entry to "G" and verify all other entries are correct.
- On the following screen, select the correct vehicle type and enter the fleet file number in the appropriate field.
- A message will be displayed indicating no certificate will be issued.

The remainder of the inspection should be completed the same as with any other vehicle. For more information, visit the Fleet Operations (https://www.bar.ca.gov/Industry/Fleet_Operations/) page at www.bar.ca.gov (<https://www.bar.ca.gov/>).

Cars for Schools Program

The Bureau of Automotive Repair's (BAR's) Consumer Assistance Program (CAP) helps to reduce air pollution by permanently retiring thousands of vehicles from California's roads each year.

In 2018, a suggestion at a quarterly BAR Advisory Group meeting was to divert some of those retired vehicles to automotive training institutions. As a result of that suggestion, BAR collaborated with the Air Resources Board (ARB) to create the Cars for Schools program. This program will provide up to 350 vehicles annually to public high school and community college automotive programs throughout the state to provide hands-on training opportunities for students. Schools may request specific vehicle makes, models, model years, or ranges of model years, or other vehicle specific features and may use the vehicles as needed to demonstrate principles of operation or repair techniques. All vehicles are provided to schools at no charge. However, schools are responsible for covering the cost of transporting vehicles from the dismantler site to the school and back again.

To retain the pollution control benefits of CAP, participating schools must sign a memorandum of understanding with BAR agreeing to specific terms such as not operating the vehicle on public roads and returning the vehicle prior to the end of BAR's current contract with dismantlers in May 2022.

Schools may obtain further information regarding the Cars for Schools program by contacting:

Denise Cunningham
Bureau of Automotive Repair
10949 North Mather Boulevard
Rancho Cordova, CA 95670
Phone: (916) 403-8837
Email: carsforschools@dca.ca.gov (<mailto:carsforschools@dca.ca.gov>)

BAR Joins Nationwide Safety Recall Outreach Effort

According to the National Highway Traffic Safety Administration (NHTSA), roughly 41.6 million vehicles equipped with 56 million defective air bags are under recall. Long-term exposure to high heat and humidity can cause these air bags to explode when deployed. To ensure vehicle owners affected by this recall are properly notified and obtain the necessary repairs, the Bureau of Automotive Repair (BAR) has joined other states in a nationwide consumer outreach effort. In partnership with a public affairs agency contracted by NHTSA, BAR is developing a notice to be sent to California consumers informing them of important steps to follow to ensure their recalled vehicle is repaired. Additional consumer protection outreach efforts aimed at positively influencing safety recall compliance rates in California are underway. BAR is actively working to integrate data provided by Carfax and provide vehicle specific safety recall information to every consumer who receives a Smog Check.

For additional information on safety recalls and repairing recalled vehicles, visit NHTSA's website at www.nhtsa.gov (<https://www.nhtsa.gov/>).

Mitigation of Illegal Street Racing

The Bureau of Automotive Repair (BAR) regularly assists local police departments, sheriff's departments, and the California Highway Patrol in training officers on how to mitigate illegal street racing and sideshow activity. BAR's role is to educate attendees on how to identify illegally modified emission control systems on street racing vehicles. The owner of a vehicle with an illegally modified emission control system can receive a citation for violation of Vehicle Code section 27156(b), which then requires the vehicle to be taken to a referee station for an inspection of the emission control

system. Additionally, once the citation is given, the vehicle may only be driven home, to a repair facility to correct the illegal modifications, or to a referee station. The vehicle must otherwise be removed from public roads until the illegal modifications are corrected and it has passed a Smog Check inspection at a referee station. These factors make it difficult for street racers to continue their illegal activity and help to ensure modified emission control systems are repaired correctly.

Maintain Your ASE Certifications with New Application

Smog Check inspectors and repair technicians can maintain their Automotive Service Excellence (ASE) certifications without visiting an ASE test center by using the new myASE renewal application. The application, available for desktops, tablets, and mobile devices, helps Smog Check inspectors and repair technicians extend the expiration date of their ASE certifications and increase their knowledge and awareness about vehicle technology. The application delivers one question per month per certification area and indicates if the Smog Check inspector or repair technician's answer was correct, and why. Smog Check inspectors and repair technicians earn one credit for each question answered correctly. After earning eight credits in one certification area per subscription period, the Smog Check inspector or repair technician's certification is extended for one year.

For more information, visit ASE's website at www.myaserenewal.com (<https://www.myaserenewal.com/>). Information on license requirements (https://www.bar.ca.gov/Industry/Getting_Licensed.aspx) and training resources (<https://www.bar.ca.gov/Industry/Training/>) is available at www.bar.ca.gov (<http://www.bar.ca.gov>).

Department of Consumer Affairs Open Data Portal

The Department of Consumer Affairs (DCA) Open Data Portal is a publicly accessible, one-stop shop for statistical data in a user-friendly format covering many of DCA's core activities such as licensing, renewals, applications, and enforcement. The portal provides access to view, filter, and download data for the Bureau of Automotive Repair (BAR) and other DCA boards and bureaus. To review BAR's licensing and enforcement data, visit the Open Data Portal (<https://www.dca.ca.gov/data/index.shtml>) at www.dca.ca.gov (<https://www.dca.ca.gov/>) and select "Bureau of Automotive Repair" under the "DCA Entity" dropdowns.

Unsafe Used Tires

Effective January 1, 2020, Assembly Bill 949 (Medina, Chapter 266, Statutes of 2019) adds a new Article 10 to the Automotive Repair Act, affecting the installation of used tires. Business and Professions Code section 9889.30 makes it a misdemeanor for an automotive repair dealer (ARD) to install an unsafe used tire on a motor vehicle for use on a public roadway. Under the new law, a used tire is considered unsafe under any one of the following conditions:

- The tire is worn to two thirty-seconds (2/32) of one inch tread depth or less on any area of the tread.
- The tire has any damage exposing the reinforcing plies of the tire, through cuts, cracks, punctures, scrapes, or wear.
- The tire has any repair in the tread shoulder or belt edge area.
- The tire has a puncture that has not been both sealed or patched on the inside and repaired with a cured rubber stem through to the outside.
- The tire has repair to the sidewall or bead area.
- The tire has a puncture repair of damage larger than one-fourth (1/4) of one inch.
- The tire shows evidence of prior use of a temporary tire sealant to repair a puncture or damage to the tire without evidence of a subsequent proper repair.
- The tire has a defaced or removed United States Department of Transportation tire identification number.
- The tire has any inner liner damage or bead damage.
- The tire shows indication of internal separation, such as bulges or local areas of irregular tread wear indicating a distortion in the tread area when compared to other areas of the tread, or belt separation.

An ARD may perform a visual inspection to determine if the used tire is unsafe, except when determining whether the tire is worn to two thirty-seconds (2/32) of one inch tread depth or less. However, the law is silent as to the method that should be used to measure the tread depth.

It is important to note that the new law does not apply to tire repairs, tire rotations, tire balancing, or a tire mounted on a wheel or rim that is temporarily removed from a vehicle and reinstalled on the same vehicle.

Under the new law, a “tire repair” means repairing a puncture that has not caused any internal damage to the tire and is no larger than one-fourth (1/4) of one inch in diameter.

The Bureau of Automotive Repair (BAR) Enforcement Division conducts investigations, often in response to consumer complaints, and may discipline licensees who do not comply with the Automotive Repair Act and related laws and regulations. As this bill prohibits an ARD from installing an unsafe used tire on a vehicle, any licensee who violates the new law would be subject to BAR discipline. Additional information is available at www.leginfo.legislature.ca.gov (<http://leginfo.legislature.ca.gov/>).

Legislation Update

The following are updates on legislative proposals that were passed into law this year. Although every effort is made to ensure the accuracy of the information provided, given the nature of the legislative process, the information provided may not reflect the latest updates. For more information about these or other bills, the Bureau of Automotive Repair (BAR) recommends contacting your trade association or visiting www.leginfo.legislature.ca.gov (<http://www.leginfo.legislature.ca.gov/>).

Assembly Bill (AB) 949 was approved by the Governor and filed with the Secretary of State on September 6, 2019 and makes it a misdemeanor for an automotive repair dealer to install an “unsafe used tire,” as specified, but does not apply to tire repairs, tire rotations, tire balancing, or a tire mounted on a wheel or rim that is temporarily removed from a vehicle and reinstalled on the same vehicle. For more information, read this edition’s article on unsafe used tires.

AB 1538 was approved by the Governor and filed with the Secretary of State on July 30, 2019 and permits an insured to select the auto body repair shop or other repair facility to repair a damaged vehicle, or to decide not to have the vehicle repaired; however, an insurer may require that a damaged vehicle be repaired as a condition for payment if the damage is sufficiently serious that safety features of the vehicle’s operating systems are compromised.

Senate Bill 112 was approved by the Governor and filed with the Secretary of State on September 27, 2019 and updates the noise testing standards for vehicle exhaust systems, and modifies existing law to allow an individual who is arrested or cited for a violation of noise standards to fix the noise violation and provide proof of correction instead of facing other enforcement actions, unless the violation consists of modifying the exhaust system of a motorcycle.

For additional information on legislation or regulation proposals, or to learn about future opportunities for public participation, visit the About BAR (https://www.bar.ca.gov/About_BAR/?4) page at www.bar.ca.gov (<https://www.bar.ca.gov/>).

Remembering Robert "Bob" Barkhouse

Bob Barkhouse, an automotive repair industry pioneer and founder of the California Automotive Teachers (CAT) association, passed away on September 21, 2019, at the age of 89.

Bob had a long and distinguished career in the automotive repair industry. He was a true visionary and worked tirelessly to establish industry standards and create educational opportunities. He founded CAT in 1969 to promote automotive repair instruction at the high school and collegiate levels. Bob was committed to industry standards of excellence and was instrumental in founding the Automotive Repair Coalition (now California Automotive Business Coalition).

Bob made a lasting impression on students, colleagues, administrators, politicians, and voters. He was a humble but forceful change-maker, committed to improving the industry. We are grateful for the many contributions he made to the Bureau of Automotive Repair and to the industry. He will be missed.

BAR by the Numbers

Licensing Summary as of June 30, 2019

License Type	Number of Registrants/Licenses
Automotive Repair Dealer	36,304
Smog Check Station	6,985
Brake Station/Lamp Station	1,968
Smog Check Inspector/Repair Technician	22,911
Brake Adjuster/Lamp Adjuster	2,882
STAR Station	4,035

Complaint Trends for January – June 2019

Trend	Total Received	%
Engine Repair & Performance <i>Repair, diagnosis, cooling systems, fuel systems, etc.</i>	2,155	34%

Trend	Total Received	%
General Repair & Maintenance <i>Brakes, suspension, steering, air conditioning/heat, etc.</i>	1,097	17%
Auto Body <i>Auto body repair, auto glass, etc.</i>	999	16%
Other <i>Motorcycle repair, improper lien sales, etc.</i>	570	9%
Transmission <i>Automatic transmission, manual transmission/clutch, etc.</i>	539	8%
Smog <i>Smog repair, test procedures, etc.</i>	385	6%
Used Car Transactions	263	4%
Vehicle Warranty	180	3%
Unlicensed Activity	168	3%

Disciplinary Actions

Public documents relating to the following disciplinary actions are available on the License Search (<https://search.dca.ca.gov/advanced?BD=21>) page at www.search.dca.ca.gov (<https://search.dca.ca.gov/>).

Business Licenses	Individual Licenses
ARD —Automotive Repair Dealer	EO —Smog Check Inspector

Follow the Bureau Online

The Bureau of Automotive Repair (BAR) is online! The website's user-friendly design allows licensees and the automotive repair industry to easily find the information they are looking for. Click on the "Industry" tab on the home page to quickly access ET Blasts, STAR information, licensing information, and more. Need a form or application? All BAR documents can now be accessed through the "Documents" tab.

Check out our website (<https://bar.ca.gov>) and keep up with BAR on Facebook (<https://facebook.com/bureauofautomotiverepair>) and Twitter@BARinfo (<https://twitter.com/barinfo>).

(<https://www.facebook.com/BureauofAutomotiveRepair/>)

(<https://twitter.com/barinfo>)

BAR Employment Opportunities

BAR hires program representatives throughout the state to enforce the laws and regulations governing automotive repair and Smog Check services. If you are interested in working for BAR, please visit the Job Opportunities (<https://www.bar.ca.gov/Pubwebquery/BARJobs/PostedJobs.aspx>) page at www.bar.ca.gov (<https://www.bar.ca.gov/>) to review examination requirements and job announcement postings.
