

Why Energy Efficiency Works

- Health care leaders are looking for innovative ways to reduce operating costs, improve financial performance and increase climate change resiliency
- Significant untapped potential exists in improving utility efficiency
- Spending less on electricity, gas and water means more funds available for client/patient care

Fast Facts About Energy In

- Long-term care facilities use over one half of the total energy consumed by Canada's health care sector. Overall, care homes use more energy than hospitals because they are higher in number
- Potential financial savings for LTC could be as high as **25%** of energy expenditures
- Lighting projects represent more than **55%** of the total potential electricity savings in care homes

- Energy utility costs in Canadian hospitals are in the range of **\$1 Billion** per year
- Hospitals have the **highest energy intensity** of all publicly-funded facilities
- Incentives for hospital energy efficiency and conservation projects make low-priority projects possible!

HealthCare Energy Leaders Ontario

Generating Savings for Care

- Reduce Operating Costs
- Redirect Funds into Patient Care
- Realize Opportunities for Capital Renewal
- Enhance the Overall Environment of Care

HealthCare Energy Leaders Ontario

Minimizing electricity, gas and water costs makes sense for Canada's health services sector but you still need the right people, with the right skills, and the right financing mechanisms to realize this potential.

For years, facility managers faced time and funding constraints that limited their ability to move forward with energy conservation, demand management and facility resiliency projects.

That's where the Canadian Coalition for Green Health Care comes in. Together with our partner, the Ontario Chapter of the Canadian Healthcare Engineering Society, we are excited to offer an affordable resource for improving energy efficiency and resiliency: HealthCare Energy Leaders Ontario (HELO).

Through auditing assistance, education, training, custom assistance, and guidance to senior leaders, HELO helps you reduce your utility consumption and your organisation's ecological footprint.

Our competitively-priced services can help you uncover energy and water conservation opportunities throughout your organisation, freeing up much needed monies for infrastructure renewal, facility resiliency, and improved delivery of compassionate patient services.

Who Can Benefit?

Health service organisations throughout Canada including hospitals, long-term care facilities, community health centres, and their senior leaders can benefit from the HELO Team's expertise.

"Financial challenges are the most pressing issues facing Canada's health system and hospital CEOs. With limited new money coming to health care, it makes sense that we strive to find savings wherever we can. The HELO program can help our health care organisations realize savings in facility operating costs, thereby freeing up valuable funds for the delivery of patient care."

*Ray Racette
CEO, Canadian College of Health Leaders*

HELO Services

Quickly access services you need to reduce your ecological footprint, lower your organisation's utility costs, and improve your preparedness for climate change impacts:

- C-Suite Coaching
- Energy Assessments
- Climate Change Resiliency Guidance
- Utility Data Analysis (electricity, gas, water)
- Energy Performance Benchmarking
- Business Case Development
- Support Accessing Incentives and Funding
- Project Implementation Support and Advice
- CDM Plans and Compliance Reporting
- Energy Management and Awareness Training
- Webinars
- Website with Tools and Resources

Start Reducing Your Energy Consumption NOW!

1. Contact us to Discuss Possibilities
2. Meet with an Energy Manager
3. Identify Energy Efficiency/Resiliency Opportunities
4. Develop the Business Case
5. Receive Implementation Support

What Others Are Saying

The HELO Team can help health care organisations identify energy efficiency opportunities which can lead to improved energy performance, enhanced climate change resiliency and help reveal funds that can be better allocated for care delivery.

*Allan Kelly
Past-Chair, CHES Ontario*

HELO's JJ Knott recently conducted audits of the energy systems at our sites in Elliot Lake, including St. Joseph's General Hospital, St. Joseph's Manor LTC facility, and the Oaks Treatment Centre. JJ provided a very thorough review of our systems as well as some very practical solutions and recommendations to allow us to move forward with demand management and energy conservation initiatives. His report was well laid out and provided clear direction. Thanks JJ.

*Jacques Ribout, P. Eng.
Director of Engineering Services
