Cognex EasyBuilder

The EasyBuilder® interface walks you through the process of setting up your vision application, step by step. Great for any type of user, the application is deployed and running in a very short time. EasyBuilder® doesn't require users to learn programming, enabling them to focus on what's most familiar ... the part!

Users will apply their knowledge to complete the lab exercises. The training focuses on hands-on labs to build tool usage scenarios within sample applications.

Prerequisite:

Familiarity with Microsoft® Windows® environment
