

Perspectives on Lifestyle and Treatment in Inherited Heart Rhythm Disorders

We are looking for individuals diagnosed with an inherited heart rhythm disorder and/or their caregivers to participate in an online survey. The purpose of this survey is to determine the lifestyle changes that patients with an inherited heart rhythm disorder, in particular Catecholaminergic Polymorphic Ventricular Tachycardia, experience in terms of physical activity and implantable cardioverter defibrillator (ICD) intervention since their diagnosis. We would like to use this data to identify which aspects of these patients lives need to be prioritized in research to improve outcomes for patients diagnosed with an inherited heart rhythm disorder.

Participation in this study is completely voluntary and will have no information about your identity. This survey will take less than 2 minutes to complete. The survey can be accessed with the following URL: <https://rc.bcchr.ca/redcap/surveys/?s=4J4MPAE4RF>.

Please do not hesitate to contact me for any further questions.
