

# SHOOTING WITH PHYSICAL DISTANCE

THE TECHNODOLLY PROVIDES OUT OF THE BOX SOLUTIONS

## FEATURES

- live action record, keyframe or hybrid built moves
- limitless repeatable passes
- +/- 0.2mm per pass accuracy
- based on the SuperTechno 15
- complete with 60' of track
- upgraded with optional 3 axis gyro stabilized head
- record/repeat three motor lens inputs
- Q Take integration - frame accurate audio playback
- sound friendly - extremely quiet
- quick to install
- fbx data export capable

## BACKGROUND

The Technodolly has been used on an extensive list of films, shows and commercials. It is often used as a controlled motion tool, for precise predictable motion. It is also used for motion control, overlaying limitless element passes. Shots can be created by recording all axis' in a classic telescopic crane and head manner, keyframed paths or a combination of both, laying down a keyframed path while recording subtle corrections or adjustments for talent. Any of these methods can be repeated within +/- 0.2mm of accuracy making the Technodolly the most versatile and accurate motion control system in the market today.

## SIMPLICITY

Taking into consideration the shooting restrictions imposed by government and studios the Technodolly can provide unique solutions. Talent that must be seen to be in close relation to one another can be shot on independent passes. Background can be shot without ever being on set with principal cast. The Technodollies placed through North America could even shoot talent in a studio in LA or NY and complete the scene in Toronto or Vancouver, never having to travel cast, passing crane paths back and forth virtually instantaneously with the same level or accuracy as if the scene was done in one place.

## WHERE

The Whites Specialty Equipment departments in both Toronto and Vancouver have experienced technicians and the ability to move the Technodolly anywhere in the country. To find out more about how the Technodolly may be useful to your shooting requirements contact one of our expert Whites operators.
