

Better Together

Since March 2020, nearly 12.9 million children have contracted COVID-19. The ongoing pandemic is a reminder of the importance of vaccination, however, more than half of parents demonstrate vaccine hesitancy.

This webinar will answer some key quest

- Is the COVID-19 vaccine safe?
- What are the side effects?
- Why should my child get the vaccine?
- How will the vaccine interact with my child's chronic illness?
- Who can I trust with correct information?

A breakout session for Spanish-speaking families will be provided, as well as a session for health care providers offering information on vaccine hesitancy, public health resources, and best practices to effectively deliver COVID-19 vaccine information to patients and families.

A Candid Conversation on COVID-19 Vaccines in Pediatrics and Young Adults

A panel of renowned Rutgers Robert Wood Johnson Medical School (RWJMS) pediatric specialists will share first-hand knowledge, experiences, and participate in a live Q&A session.

Zoom Webinar:
Thursday, May 12
6:30 p.m. ET

RSVP
