

# February

Katie's Kids

Room 7

## Highlights

Last Friday, during our Winter Project we performed a science experiment. We made ice cream in a bag. Each student had a turn adding the ingredients into the bags. Once all the ingredients were added the students each took turns shaking the bag. The students had fun watching the ice cream mixture turn from liquid to solid right in front of their eyes.

Room 7 also hosted a hot chocolate sale during our Winter Project, because what is better on an ice cold day than a steamy cup of hot chocolate? Students were each able to help stir the chocolate powder in and took turns handing out cups, marshmallows, and collecting the money from our parents as they walked in.

## Important Dates

SNL	<b>11th</b>
School Age Available	<b>17th</b>
Closed	<b>20th</b>

## Classroom needs:

- Tools, i.e hammers, nuts and bolts, screw drivers, wrenches, etc. (we will label and return them)
- Loose parts for "constructing"
- PVC pipes, various sizes

## Construction Project

During our construction project we will be focusing on building, demolishing, and learning about different jobs that people in construction

do. Students so far have used a ruler to measure how high they can build, stamped houses with paint, and hosted a tool shop to buy and sell different tools.
