

Screening, Protection & Tracing Solutions

As organizations implement Return to Work (RTW) strategies in the face of the global pandemic, a Screening, Protection and Tracing (SPT) plan is critical to protecting employees, visitors, and the broader community. At Vision Technologies, our SPT solutions are designed to help screen people at the point of entry and to protect your organization through touchless access control, mask detection, and elevated skin temperature (EST) measurement. In addition, our SPT solutions enable organizations to enforce density and social distancing policies and to perform a contact tracing analysis to identify where an infected individual came into contact with others. With a comprehensive SPT solution in place, you can prepare your organization for a safe and secure return to work.

Design, Build, & Support

Vision's full-scope SPT solution set encompasses design, build, and post-implementation support. Our Integrated Technology Delivery (ITD™) methodology will help you achieve your SPT goals by blending the latest technology, sophisticated design and our talented team of certified professionals. Post-implementation, choose from our comprehensive menu of maintenance and support offerings through our Managed Services Center (MSC).

- ▶ Touchless Access Control
- ▶ Elevated Skin Temperature Detection
- ▶ Mask Detection
- ▶ Contact Tracing
- ▶ Self-Deployable Systems to Fully Integrated Solutions
- ▶ Density & Social Distancing Policy Enforcement
- ▶ Access Control System Integration
- ▶ Video Management System Integration
- ▶ Visitor Management System Integration
- ▶ NDA & TAA Compliant Solutions Available

Screening, Protection & Tracing Solutions

Touchless Access Control

Our embedded face & palm recognition sensor solutions provide 100% hands-free hygienic user authentication for various applications including Access Control, Time & Attendance, Visitor Management, Event Management & more.

Elevated Skin Temperature & Mask Detection

Several states and local municipalities have implemented orders or issued guidance urging or requiring that temperature checks be implemented before employees are permitted to report to work. In addition to providing touchless face and palm user authentication, our SPT solution provides fast and accurate Elevated Skin Temperature (EST) measurement and detects if a protective mask is being worn. Users can be denied door access if an EST or no mask is detected. Identifying users having EST or not wearing a mask greatly helps prevent the spread of contagions.

Contact Tracing

Contact tracing can be a daunting and often manual process unless you have the right solution in place to facilitate these efforts. Vision's solution set can help your organization to trace potentially contaminated individuals using integrated access control reporting and analysis tools, video surveillance, wireless infrastructure and IoT sensor technology.

Vision can provide access control solutions that help organizations find all people who went through a door in close proximity to someone thought to be contagious. Organizations can quickly perform a forensic analysis to correlate access events by time window to identify people who are at increased risk of being in contact with contaminants or contagious individuals. This will allow enterprises to proactively advise individuals of their potential contamination and take the necessary hygienic precautions, as outlined by health and safety procedures and regulations.

In addition, Vision can provide the latest RTLS solutions that integrate with employee directories and visitor management systems to enable in-building wireless contact tracing.

Vision can help you to leverage the latest IoT technologies as well through occupancy sensor arrays designed to minimize contact by helping to enforce density and social distancing policies.

Touchless Visual Communication & Collaboration Solutions

As organizations implement Return to Work (RTW) strategies in the face of the global pandemic, Touchless Visual Communication and Collaboration (TVCC) solutions are critical to employee and visitor safety while enabling productive meetings and teamwork. At Vision Technologies, our TVCC solutions are designed to create a safe and secure touchless meeting experience where people can communicate and collaborate seamlessly and with ease with in the room, remotely, or both. In addition, our room system and digital signage solutions enable organizations to reinforce occupancy and social distancing policies and share important real-time health and safety information from a range of integrated solutions. With a comprehensive TVCC solution in place, you can prepare your organization for a safe, secure and productive return to work.

- ▶ Touchless Conference Rooms
- ▶ In-Office & WFH Conferencing Solutions
- ▶ Occupancy & Social Distancing Policy Enforcement
- ▶ Digital Signage for Policy & Real-Time Communication
- ▶ Conference & Huddle Room Scheduling & Analytics
- ▶ Visitor Management Systems

Design, Build, & Support

Vision's full-scope TVCC solution set encompasses design, build, and post-implementation support. Our Integrated Technology Delivery (ITD[®]) methodology will help you achieve your TVCC goals by blending the latest technology and sophisticated design with integration by our talented team of certified professionals. Post-implementation, choose from our comprehensive menu of maintenance and support offerings through our Managed Services Center (MSC).

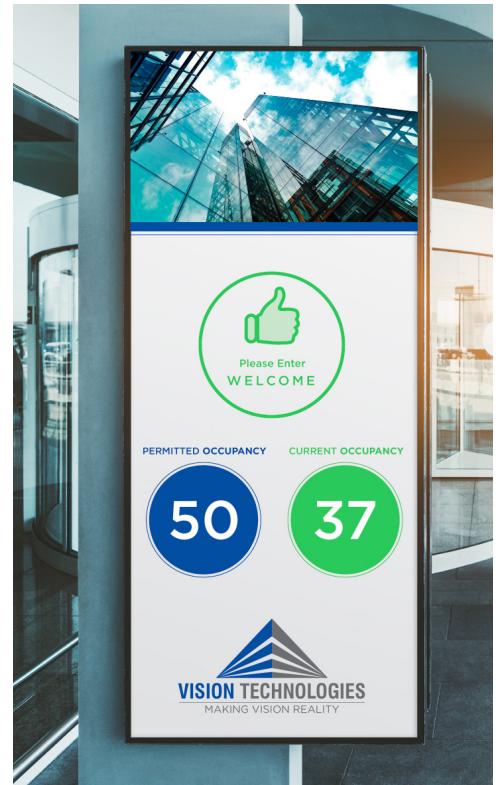

Touchless Meetings

Enhance the safety and productive utilization of your meeting spaces with touchless room reservations and scheduling combined with the ability to present and share content, touch-free, from any laptop or mobile device.

Touchless Visual Communication & Collaboration Solutions

Occupancy & Social Distancing Policy Enforcement

Many states and local municipalities have implemented orders or issued guidance on occupancy limitations and social distancing. By leveraging intelligent meeting room systems, our TVCC solution enables you to move beyond simply automating occupancy detection and environmental control such as lighting and temperature adjustment. With integrated IoT sensors and intelligent camera systems, real-time occupancy detection is enhanced with people counting and social distancing measures to facilitate policy enforcement. Policy violations can trigger room system occupant alerts, notify HR or management teams, or lock down the room systems.

Digital Signage

Digital signage is a critical facet of effective RTW strategies allowing organizations to quickly share important health and safety information in real-time including occupancy, mask, temperature, sanitization, and social distancing policies. Vision's TVCC solutions integrate with people counting occupancy sensors, access control, and Visitor Management Systems (VMS). This provides organizations with the ability to display real-time occupancy counts to facilitate capacity management and automated instructions at points of entry where integrated mask and temperature detection solutions can display results or alerts. As guests arrive, integrated VMS systems can display QR codes for contactless, touchless check-ins and integrated queue management tools can optimize safe customer flows.

Communicate & Collaborate Safely & Securely

Vision can help you to find or better utilize the best Unified Communication & Collaboration (UCC) solution for your organization to keep your teams securely connected whether they have returned to work or are working remotely. Our comprehensive TVCC solution set spans Cisco WebEx, Microsoft Teams, Zoom, RingCentral, and other cloud-based Video-as-a-Service (VaaS) solutions for interoperability between huddle rooms, conference rooms, video conferencing systems, laptops, tablets, and other mobile devices. These solutions are software or cloud-based applications that enable conferencing with voice, video, and screen sharing to keep your teams communicating and collaborating seamlessly no matter where they are located.

Customer Experience

We craft unparalleled touchless AV & UCC workplace experiences.

Technology as a Service

Technology enables organizations to work more efficiently, maximize productivity, and ultimately accomplish their missions, but when you own the technology, you own the risk if something goes wrong or it no longer fits your business model. Technology as a Service (TaaS) allows organizations to focus on their missions instead of worrying about the technology underlying work environments or the risk of being handcuffed to outdated obsolete technology. Think about TaaS as a bit like driving a car, with gasoline, oil, and servicing, and an upgraded model every couple of years! It's one simple, flexible subscription for all your technology needs.

Subscription-Based Model

Vision offers an innovative way to pay for your technology solutions. TaaS is a subscription agreement with low monthly payments that encompasses the design, build, and support of your technology solution. This model provides your organization with the ability to take advantage of the latest technology bundled with world class support while avoiding the traditional large up-front capital investment and protecting your solution from obsolescence.

Technology Refresh Assurance Commitment (TRAC)

Keep your organization on track with our Technology Refresh Assurance Commitment (TRAC). TRAC protects your solution from obsolescence allowing you to keep up with the rapid evolution of technology. At any point during your subscription, you have the option to refresh or replace your solution so that you can rest easy knowing that you have a future-proof subscription and that you are in good hands so that you can focus on your mission.

Bundled Support Services

Our subscription agreement includes your warranties and Managed Services Center (MSC) support contracts over the contract term all in one monthly payment. Lock in the cost of warranties, maintenance and support at today's labor rates for the duration of your contract term.

VISION TECHNOLOGIES

MAKING VISION REALITY

Technology as a Service

No Budget? No Problem

Take advantage of our subscription-based model to avoid large upfront capital expenditures. Convert your traditional technology capital expenses (CapEx) to operating expenses (OpEx) with a predictable low monthly fee. Alleviate budget pressures, free up working capital and invest in revenue generating assets. We also suggest that you consult with your financial advisors to find out how an operating expense can benefit your specific operation.

Uncontrollable Event Protection

Protect your equipment from unforeseen damage or loss arising from unexpected natural disasters or events. Should your equipment be damaged under such circumstances, we provide protection to help you cover your out of pocket costs arising from the unusual incident. See terms for details.

You Choose at Renewal

Technology changes rapidly, and we offer you the choice to refresh your solution before the end of your contract term with our Technology Refresh Assurance Commitment (TRAC), renew your contract with flexible terms or return the equipment. You decide what's best for you. See terms for details.

Technology Solutions

There is a rapid advancement of technology as organizations derive value from improved decision making, new competitive advantages, improved profitability, innovative ways to communicate and collaborate, and enhanced safety and security. The rapid advancement also stems from constantly evolving threats in the physical and cybersecurity spaces. It is critically important that organizations stay ahead of these threats and can leverage the latest solutions to advance their missions. Vision's TaaS offering is designed for this purpose and extends to a wide variety of solutions, including but not limited to:

- ▶ Screening, Protection, & Tracing (SPT) Solutions
- ▶ Touchless Visual Communication & Collaboration (TVCC)
- ▶ Audio-Visual Solutions
- ▶ Integrated Security Systems
- ▶ Wireless Solutions
- ▶ Network Infrastructure
- ▶ IoT & Intelligent Building Solutions
