

# UHA FY20 Quality Performance

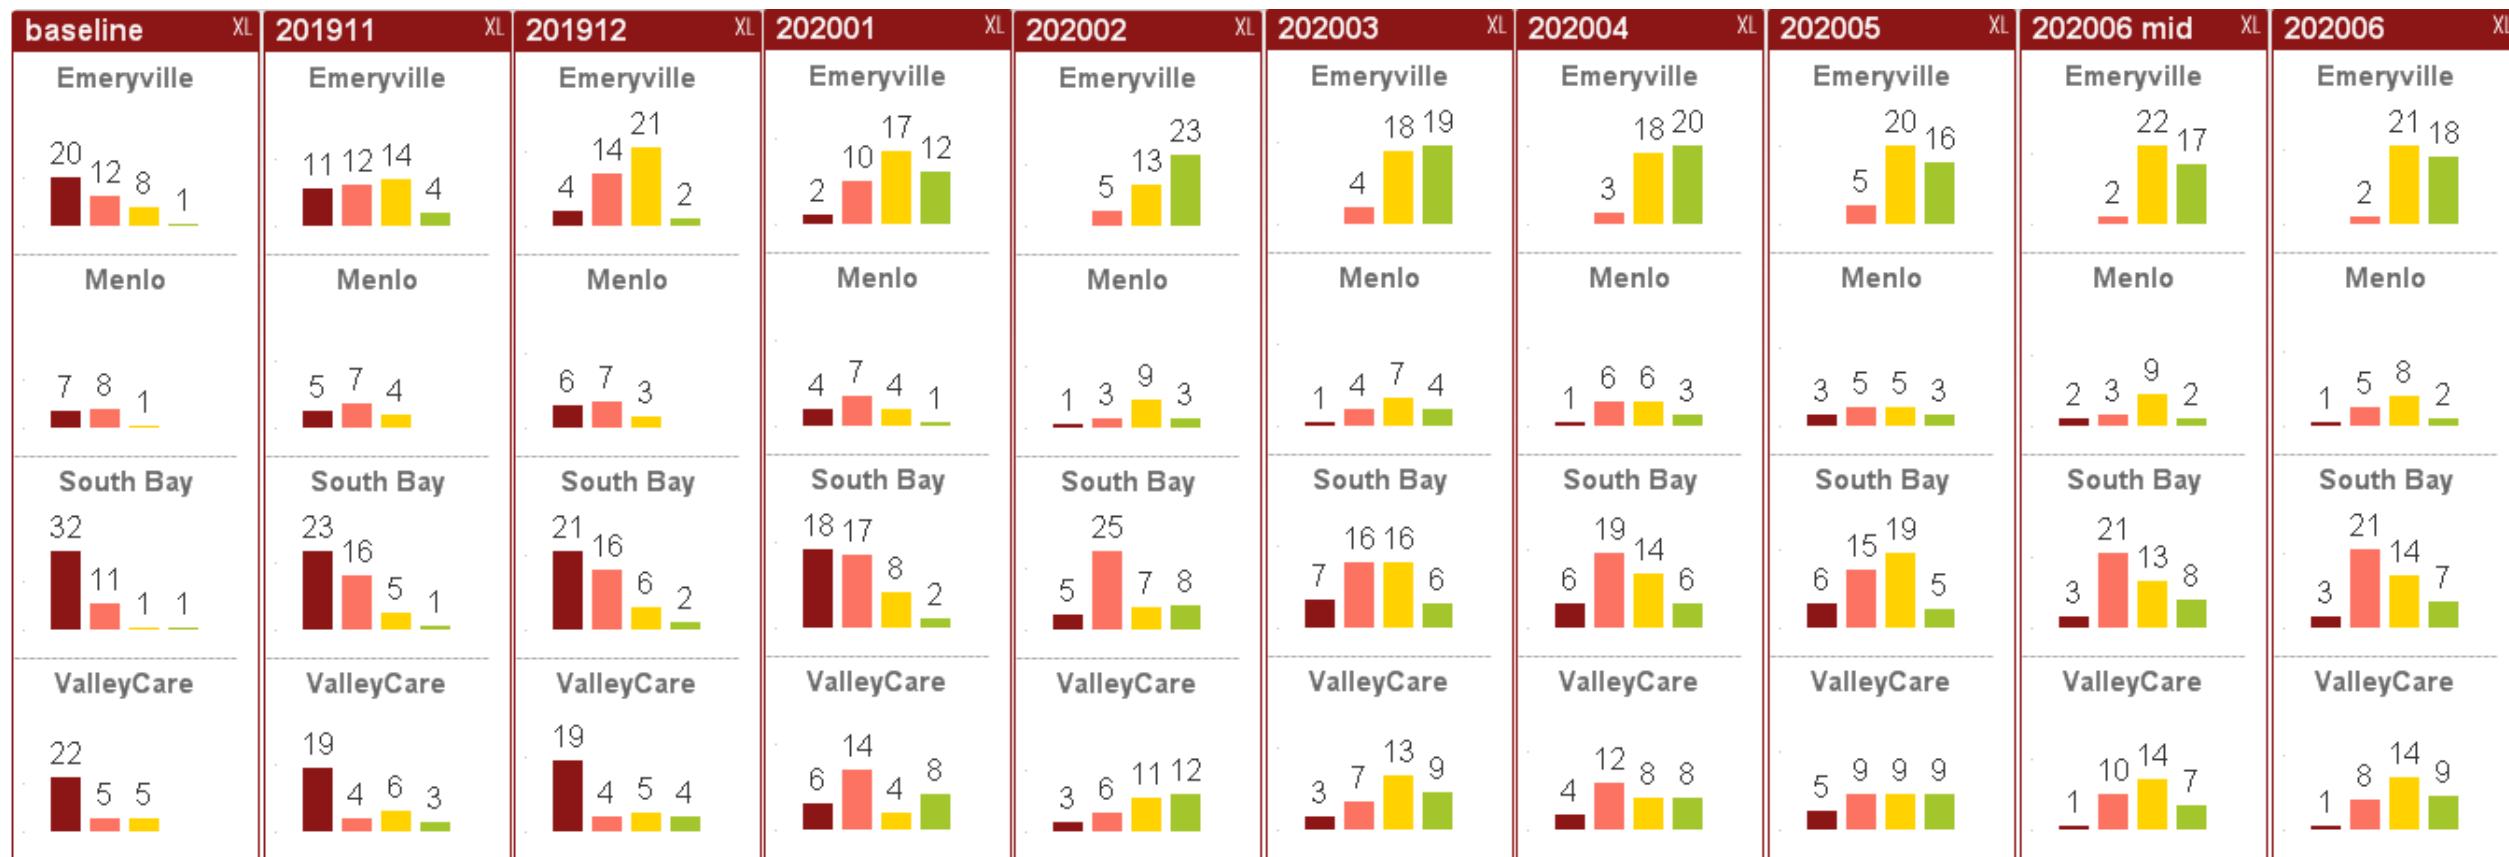

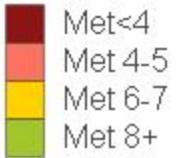

Our goal is to have 50% of providers reach target on 8 or more measures by the end of FY20. Currently, this is true for 27% of providers.

Our monthly data shows that quality improvement slowed starting in March, when COVID-19 was the main focus for our organization.

The quality team is working closely with providers to provide twice-monthly reports to direct our focus to the measures that need the most improvement during these last few months of FY20.
